THE WORLD'S EASIEST WINDOWS SCHEDULER

SkedEzy

(A Windows Magazine recommended download - Superior Shareware column, Dec 1995)

The only difficulty you will have with this software is believing how easy it is to use!
Forget special formats, just type in a date in plain English - abbreviated if you like. It's that easy!
It's the same for times and recurrence periods (anything from minutes to years). Of course, all the standard ways of writing dates and times are supported as well. There is hardly anything to learn thanks to SkedEzy's natural language interface. Abbreviations, extra words, choice of punctuation etc. will not worry it. Try it for yourself.

Here's what people are saying:

Australian Users

'I have tried your software with loads of success.'

'Congratulations on a very good product.'

U.S. Users

'Superb.'

'*The best scheduler on the market.'*

'Great ease of learning and usability are the main selling points and distinguishing points of SkedEzy within its class of software.'

Reviewers

'...SkedEzy's highly nifty.' - **Daniel Rutter, PC Review**

"When all you want is a quick reminder to turn on the roast at 3pm, you do not want to have to write out your life story...This is where SkedEzy absolutely shines' - **Mike James, The Australian Computer Trader.**
