What is SetFileDate v 1.01 ?

SFD 1.01 is a simple utility for changing date and time stamps of up to 255 files at a time. You mark the files under Explorer and right-clicks on them and uses SEND TO direct the files to SetFileDate.

I wrote SFD because I wasn't able to figure out any way to change dates under win95, at least with the build I do use, so I had to invent one. SFD has got a few shortcomings which are caused by the fact I didn't consider them important enough to remove from the program. These shortcomings are: 1. Explorer's display isn't updated after SFD has changed the dates and times. 2. SFD shows long filenames in DOS 8.3 format. If I get enough angry mail concerning these aspects, then I'll investigate the first shortcoming and write a routine to remove the second shortcoming. SFD has all help that's needed integrated into the file. The second shortcoming is caused by Explorer as it uses DOS 8.3 format to send filenames to exe's under SENDTO. The situation would be totally different if I had written SFD as an DLL hooked into Explorer. Maybe I'll do it some day.

SFD does change the date and time when a file was last modified. This info is shown by Explorer on the screen when you list files and by DOS's dir-commnd. SFD leaves the info about when a file was created for the first time untouched. This info is seen when you choose properties in Explorer.

How to install SetFileDate ?

Run Setup, which is included in this package. This copies SetFileDate.exe into the SENDTO subfolder of your Windows directory. If Setup.exe is corrupted, then you can unpack the SETFILEDATE.EX_ file with any program that can read a file compressed by MS Compress.

SHAREWARE

SFD 1.01 is shareware. You're supposed to pay the author \$5 for this program if you like and continue to use it. Send at least an e.mail to me telling which area you live in and where from you did get SFD, so I can see how far the program has spread.

MULTILINGUAL SUPPORT

You can configure SFD to use either Swedish, Finnish or English.

DISCLAIMER

The author denounces any responsibility for whatever damage can be caused by using this software. (ie everything from you forgetting your cat in the micro-owen to green small men running across your apartment. This clause is wise to use with any software

which is circulating in the US). The author also doesn't give any warranty for this program.
