Overview

Win-Secure-It ® is **THE Security Solution for Windows 95.**

Win-Secure-It ® **provides the security you need without changing the way you work.**

Once you entered your password, you just continue to work as you used to, **a simple password is all it takes.**

Win-Secure-It ® Security solution allows to **prevent accidental or deliberate damage**, prevent, protect and control access to valuable applications and information, It even **protects against unsupervised usage** of the online services, Internet and software piracy.

Win-Secure-It ® Security solution secure at the lowest operating system level, using **an advanced file based protection scheme** that allows it to secure everything by preventing unauthorized access to resources and information stored on the computer.

Win-Secure-It ® Windows 95 Security solution is **the easiest and simplest to use**, with **the most effective protection while not sacrificing ease of use.**

Win-Secure-It ® Windows 95 Security solution **is a MUST HAVE tool for anyone who shares his/her computer** with someone else, its flexibility and ease of use will assure your data and information are being protected against accidental or deliberate damage.

Win-Secure-It ® Windows 95 Security solution has **a very intuitive and simple to operate user interface, yet a very powerful one** that lets any user novice to guru use the program in just a meter of seconds.

[Who should use the product](#)

[Ways of protecting your data](#)

Who should use the product

You can find use for this product at home or at your office.

If you don't want your children, or work members, to run certain applications, or read certain files, you can block access to those files.

If you want to prevent accidental or deliberate damage, prevent, protect and control access to valuable applications and information stored on your machine or even protects against unsupervised usage of the online services, Internet and software piracy.

If you know that someone at work is working on your machine, and you want to know what he is doing before you confront him, you can choose to trace access to specific files, without denying the access itself. You can check what files were accessed at the time that he was working on your machine.

Win-Secure-It® is excellent for parents who want to allow children to use only certain software on the family PC, you don't have to worry that they might damage important files by mistake (like your private data or tax and business documents).

Ways of protecting your data

There are 3 levels of protection, based on file access you can prevent all access to the files (No Access), allow only Read Only access or just trace specific files that were accessed (Just Log).

n No Access

The files that match the Path expression, it will be blocked for anyone who doesn't know the password.

No editing, No executing. No renaming or deleting or any other operation that may modify or use the file.

If there will be security violations they will be written into the log file and will be displayed the next time you log into your system with the correct password.

n Read Only Access

The files that match the Path expression, will be available for Read Only access only.

No modifying, No renaming or deleting or any other operation that may modify the file.

If there will be security violations they will be written into the log file and will be displayed the next time you log into your system with the correct password.

n Tracing Access (Just Log)

All the files that match the Path expression, will be available, and their usage will also be traced, Time and Action will be written to a log file and will be displayed the next time you log into your system with the correct password.

In each level the protection can be silent, which means that when the security is violated the access will be denied (according to the security level), but no sound or pop-up dialog message will appear.

The protection violation can also display a pop-up dialog message and make play a tone depending on the method you choose.

Setting up Win-Secure-It ®

Win-Secure-It ® uses a simple and highly intuitive installation and configuration interface to select and define what restrictions, if any, users will encounter when they reach the windows 95 desktop.

Why and How to register

The Win-Secure-It ® product is marketed using the “Shareware” method, a method which lets you try the actual product, on your own computer, before deciding whether to purchase the product.

That way, you can base your purchasing decision on the actual product, not on some marketing hype or some anonymous reviewer recommendation.

[Why](#)

[How](#)

[Difference between the Reg. ver and the unReg. one](#)

Troubleshooting

While developing the Win-Secure-It ® one of the targets was to create a product which will be as trouble free as possible, we have tried to avoid all things that may damage your computer and data, and we tried to avoid all the area that may prevent and distract other programs while running. We have tried to list here any problem that we think you may see that will prevent you from using the product.

License Agreement

Win-Secure-It ® version 1.00
Copyright © 1995 - 1996 Yonat Dascalu.
All Rights Reserved.

For ordering information, see the file ORDER.TXT.

Win-Secure-It ® For Windows 95
Version 1.00
License Agreement
Effective Apr 1st 1995

License Agreement

The use of Win-Secure-It ® is subject to the following terms and conditions.

Title To The Licensed Software

Title to the licensed software is NOT transferred or sold to the end user. The end user is granted a non-exclusive license to use the software on a SINGLE computer or computer work station. EACH computer or computer work station must have its own licensed copy of the software.

Copyright Protection

Win-Secure-It ® is copyrighted material. It is protected by the copyright laws of the United States, the State of California, and other proprietary rights of Yonat Dascalu. You may not make any changes or modifications to Win-Secure-It ® or this manual. You may not decompile, disassemble, or otherwise reverse-engineer the software in any way.

You may make copies of Win-Secure-It ® only under the terms of the section titled "Limited License To Copy The Licensed Software".

You may use Win-Secure-It ® on a thirty (30) day trial basis only, provided you do not violate the protection afforded the licensed software by the copyright laws, and you agree to the terms of the license agreement. If you use Win-Secure-It ® past the 30 day evaluation period you are required to purchase it by paying the registration fee.

Limited Warranty

Yonat Dascalu does not warrant that the licensed software will meet your requirements or that the operation of the software will be uninterrupted or error free. The warranty does not cover any media or documentation which has been subjected to damage or abuse by you or others. The software warranty does not cover any copy of the licensed software which has been altered or changed in any way. In other words, there is no warranty either implied or expressed.

ANY IMPLIED WARRANTIES INCLUDING ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ARE LIMITED TO THE TERM OF THE EXPRESS WARRANTIES. Some States do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

Other Warranties

The warranties set forth above are in lieu of any and all other express or implied warranties, whether oral, written, or implied, and the remedies set forth above are the sole and exclusive remedies.

Limitation Of Liability

Yonat Dascalu is not responsible nor liable in anyway for any problems or damage caused by the licensed software that may result from using the licensed software. This includes, but is not limited to, computer hardware, computer software, operating systems, and any computer or computing accessories. End user agrees to hold Yonat Dascalu harmless for any problems arising from the use of the software. Yonat Dascalu SHALL NOT IN ANY CASE BE LIABLE FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, INDIRECT OR OTHER SIMILAR DAMAGES ARISING FROM ANY BREACH OF THESE WARRANTIES EVEN IF Yonat Dascalu OR ITS AGENTS OR DISTRIBUTORS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

THIS AGREEMENT SHALL BE GOVERNED BY THE LAWS OF ISRAEL AND SHALL INURE TO THE BENEFIT OF Yonat Dascalu AND ANY SUCCESSORS, ADMINISTRATORS, HEIRS, AND ASSIGNS. ANY ACTION OR PROCEEDING BROUGHT BY EITHER PARTY AGAINST THE OTHER ARISING OUT OR RELATED TO THIS AGREEMENT SHALL BE BROUGHT ONLY IN ISRAEL.

In no case shall Yonat Dascalu's liability exceed the license fees paid for the right to use the licensed software, or a sum no greater than one Dollar (\$1.00), whichever is less.

Limited License To Copy The Software

You are granted a limited license to copy Win-Secure-It ® ONLY FOR THE TRIAL USE OF OTHERS subject to the terms of this software license agreement described herein, and that the conditions described below are met.

- n No fee, charge or other compensation may be accepted or requested by anyone without the express written permission of Yonat Dascalu.
- n Public Domain Disk Vendors May NOT CHARGE a fee for the Win-Secure-It ® itself.
However you may include Win-Secure-It® on a diskette/CD-ROM for which you charge a nominal distribution fee.
The purchaser of said diskette must be informed in advance that the fee paid to acquire the diskette does NOT relieve said purchaser from paying the Registration Fee for Win-Secure-It® if said purchaser uses Win-Secure-It®.
- n The statement of shareware registration requirements MUST be printed on a label, or other form, that is directly attached to the distribution media.
- n Operators of electronic bulletin board systems (Sysops) may post Win-Secure-It® for downloading by their users without written permission ONLY AS LONG AS THE ABOVE CONDITIONS ARE MET. A fee may be charged for access to the BBS AS LONG AS NO SPECIFIC FEE IS CHARGED FOR DOWNLOADING Win-Secure-It® files without first obtaining the express written permission from Yonat Dascalu to charge such a fee.

Evaluation and Registration

This is not free software. This license allows you to use this software for evaluation

purposes without charge for a period of 30 days. If you use this software after the 30 day evaluation period a registration fee of 29 US Dollars is required. Payment can be in Cash, money order, checks Payments in checks must be in US dollars drawn on a US bank or Israeli shekels, cash payment can be in any currency. Payments should be sent to:

Yonat Dascalu
10 Azmout Street
Ness-Ziona 74010
ISRAEL

Quantity discounts are available, as described in the section Ordering Information/Order Form.

When payment is received you will be sent a registration key to remove all unregistered messages and documentation and the latest version of Win-Secure-It®.

One registered copy of Win-Secure-It® may either be used by a single person who uses the software personally on one or more computers, or installed on a single workstation used non simultaneously by multiple people, but not both.

You may access the registered version of Win-Secure-It® through a network, provided that you have obtained individual licenses for the software covering all workstations that will access the software through the network.

Information on our other software products

We develop top rated windows software products for windows 3.x, 95 and NT for over the last few years.

Many of our products are marketed using the “Shareware” method, a method which lets you try the actual product, on your own computer, before deciding whether to purchase the product.

That way, you can base your purchasing decision on the actual product, not on some marketing hype or some anonymous reviewer recommendation.

[Win-eXpose-I/O®](#) - File I/O Tracer / Debugger / Monitor for Windows.

[PrintOut®](#) - Highly Flexible Text File Printing Utility.

[FindRGB®](#) - Powerful RGB Matching Colors Utility.

Win-eXpose-I/O®

Win-Expose-I/O

File I/O Tracer / Debugger / Monitor for Windows 3.x and 95

Win-eXpose-I/O® is a Windows file I/O Tracing/Debugging, Monitoring SHAREWARE util. that lets you examine in real time what files each running application is using or trying to use.

Win-eXpose-I/O® for Windows traces all the file activities in all the application and in all the different VM (even DOS boxes) and gives you a clear picture on problems troubleshooting (like where and what the hell is the help file / INI file that the application is using or complaining that is missing).

Win-eXpose-I/O® for Windows is a MUST HAVE tool for anyone who is installing windows software on the computer or just trying to make sure the current software is working properly, Win-eXpose-I/O saves those HUGE amount of hours trying to configure new or existing software by letting you know in real time what files each application is using or seeking.

Win-eXpose-I/O® for Windows application has a very intuitive and simple to operate user interface, yet a very powerful one that lets any user novice to guru use the program in just a meter of seconds, just run it and then activate the other applications and you will see on the Win-eXpose-I/O screen a real-time logging of all the file activities and their results.

Win-eXpose-I/O® for Windows is also used as a GREAT performance improves by letting you know for each application all the file seeking failures (like searching for a file on the path) and then just by changing a few system settings like PATH or working directory you will gain a performance improvement.

PrintOut®

PrintOut® for Win 3.x - Highly Flexible Text File Printing Utility

PrintOut® is a Flexible text file printing SHAREWARE windows util. That lets you print text file in different formats.

PrintOut® lets you even couple a few pages in one printer page to save you money and make maintaining hard copy documents and source files easier.

PrintOut® Also Supports Background Printing to save you time and allow multitasking, it also supports Drag and Drop in order to make file printing and multiple file printing easier, this version also supports Command Line Parameters to automate tasks and enable PrintOut® to work from batch and script files.

PrintOut® is a MUST HAVE tool for anyone who prints text files in any form, its flexibility and ease of use will save you a lot of time and money.

PrintOut® application has a very intuitive and simple to operate user interface, yet a very powerful one that lets any user novice to guru use the program in just a meter of seconds

FindRGB®

FindRGB for Windows 3.x and Windows 95 **Powerful RGB Matching Colors Utility.**

FindRGB® is a graphic SHAREWARE Windows 95 util, that lets you match colors you like and find What RGB combination makes them. FindRGB® lets you choose from a color palate, or from other applications running on your screen, or you can create your own colors using the scroll bars.

You can choose the color you like as a background color, and than match another color as a foreground color, and see how they look together right away.

Once you are done choosing and matching the colors, you can save them in an include file "RGBColors.h" under a name that you choose.

FindRGB® is a MUST HAVE tool for anyone who designs and write user interfaces and deals with graphic elements programming.

FindRGB® save those HUGE amount of hours trying to find the right color and match the color together.

FindRGB® application has a very intuitive and simple to operate user interface, yet a very powerful one that lets any user novice to guru use the program in just a meter of seconds, just run it and match the colors...

Windows consulting

Needs Windows Consulting ?

Yonat Dascalu is providing worldwide consulting for Windows programming, GUI building, MFC, C++, C, Assembly, Visual basic, Windows Device Drivers (VxDs), Multimedia and network programming.

Installation

In order to install Win-Secure-It ® all you need to do is run the SETUP.EXE program on the installation diskette.

After the installation completes you will be asked to restart your computer, and then you will be asked for your personal password, that all.

Starting now, when you logon to your computer you will be prompt with a dialog asking you what is your password, type it in and that all.

First time you run the program

After the installation completes you will be asked to restart your computer, and then you will be asked for your personal password, that all.

Starting now, when you logon to your computer you will be prompt with a dialog asking you what is your password, type it in and that all.

You must re-type in your new password so your computer will be secured.

Setting up your personal password

Setting up your personal password is an important step towards protecting your data. you are asked to enter the password twice in order to assure that no mistakes will be done.

The password is case sensitive the passwords "eXpert" and "expert" are two different passwords.

Please try to choose a password that you will remember.

We suggest that you will also write the password in a safe place in case you may forget it.

Please try to choose a password which will not be obvious like your first or last name.

You will be able to change your password anytime you want to in the future, you can do so by choosing the "modify settings" option in the Login password dialog.

Setting up other security restrictions

By choosing the "modify settings" option in the Login password dialog and entering the correct password you will be able to modify your current security settings, You will be able to control security settings, the way notification are made, and the items to be protected.

What is a Security Alert

A Security Alert is an event that occur in your system when a security violation happens.

A security violation happens when a file or other resource that you have defined as protected is being accessed by a user which did not supply the password, when he logged into your desktop.

For example if you defined that only "Read Only" access is allowed to *.doc files and someone tries to modify or delete one of your .doc files this is a security violation and Win-Secure-It ® will prevent it from succeeding and also will write down a notification in the log file, for that event.

General

Protecting your data does not mean you do not trust the other parties that are using your computer, it is just for protecting you and your data.

It is very important to protect it in order to avoid potential problems and sorrows.

You will be able to change your settings anytime you want to in the future, you can do so by choosing the "modify settings" option in the Logan password dialog.

Security Items

Security items are the items that you can protect using the Win-Secure-It ® product, These are the items which controls how the security system works, how invisible is it and other items embedded in the product.

You will be able to change your settings anytime you want to in the future, you can do so by choosing the "modify settings" option in the Login password dialog.

In order to login to the system without having any restrictions you should supply the correct login password.

Any login attempt done without supplying the correct password, will be reported and security restrictions will be applied for that user working session.

Why

Registering brings with it a number of advantages.

- n All the Unregistered Copy notice will no longer appear.
- n You will receive a manual and the latest product version.
- n If you supplied an E-Mail account a notice for each version release will be sent to you.
- n You will have FREE technical support should you have any problems.
- n Your support will encourage me to continue to improve the products Win-Secure-It ®.
- n You will have the knowledge that you personally helped a fledgling software developer and furthered the SHAREWARE concept.

As I see it, by using this Win-Secure-It® software you are saving yourself a lot of potential problems in trying to secure your working computer place and data. so this small registration fee is really a small one to pay comparing to the benefits that the product Win-Secure-It® brings you.

So make sure you complete the registration form (ORDER.TXT) as completely as possible and sent it.

How

Using CompuServe

If you have an account at CompuServe,
You can GO SWREG and order item #11090
the fee will be added into your regular CompuServe charge.

Using Surface Mail

Simply fill up the ORDER.TXT file and send it with the registration fee.

For your ease here is a copy of the file **ORDER.TXT**

All of our software is user supported. Please help us by sending your comments, suggestions, and changes or additions you would like to see in future versions. Please send us a report if you happen to find a bug.

Diffrence between the Registered version and the UnRegistered one

The software that we bring to you is not crippled !!!

You can test the product as it will look like, after you register.

However, as the registration fee is our bread of life, there are some reminders, that this is a shareware product, and that if you want to keep using it, you have to pay the registration fee.

As soon as you register, all the reminders will disappear.

After 30 days, message

This is not free software.

This license allows you to use the software for evaluation purposes without charge for a period of 30 days.

After 30 days are over, a message will appear to remind you that the evaluation period is over, and you have to pay the registration fee, you will still be able to use the product without any new limitation.

Limit to 5 files restrictions in each category

You can use 5 path expression with wildcard as security target in each category.

When you register the software , you will no longer have this limitation.

Possible problems

The computer halts once you try to kill the application from the “Running Tasks” list.

It may look like a Bug, but actually its for your own protection.

If some wise guy will notice that you have a security protection on you files, and find what is the name of the application that operate the security check, and will try to kill this application... He will not be able to do so.

If you want to stop Win-Secure-It® please use the uninstall utility or uninstall it using the “Add/Remove program” option in the control panel settings.

The Win-Secure-It® application name doesn’t appear in the pop-up menu at the bottom of the screen.

This is for security purpose, the application is running at the background “Silently”.

At the Password pop-up screen you can click the CANCEL button without typing the password, and the pop-up window disappears and let you continue (without requesting the password)

If you have entered Path expression target for protection, with no password, you can still do everything, as long as you don’t try to touch those files.

If you didn’t enter a password your access to those files will be denied.

If you did enter the correct password, the road is clear, you can continue your work as usual.

How to uninstall the product

simply run the UNINSTAL.EXE program in the installation directory or run it from the installation program group.

You can also you the "add/remove program" option from the:
Start->settings->Control Panel option.

Prohibiting access to files and programs

By adding the program executable name (Program-Name.exe) to the list of restricted files, you can prohibit the use of that executable by unauthorized users.

Just click on the ADD button and add the file name to the list of files in the "No Access" category.

You will be able to change your settings anytime you want to in the future, you can do so by choosing the "modify settings" option in the Login password dialog.

Allow only read only access to files

By adding the restricted file name to the list of restricted files, you can prohibit any modification to that file or deleting it.

Just click on the ADD button and add the file name to the list of files in the "Read Only" category.

You will be able to change your settings anytime you want to in the future, you can do so by choosing the "modify settings" option in the Login password dialog.

Monitoring data accessed on your machine

By adding the restricted file name to the list of restricted files, you can monitor any access made to this file what so ever.

Just click on the ADD button and add the file name to the list of files in the "Just log" category.

You will be able to change your settings anytime you want to in the future, you can do so by choosing the "modify settings" option in the Login password dialog.

Setting up a personal password

You should type your new personal password twice in this dialog box.

After entering the new password, in each new Login to your system you should enter this password.

Setting up your personal password is an important step towards protecting your data. you are asked to enter the password twice in order to assure that no mistakes will be done.

The password is case sensitive the passwords "eXpert" and "expert" are two different passwords.

Please try to choose a password that you will remember, we suggest that you will also write the password in a safe place in case you may forget it.

Please try to choose a password which will not be obvious like your first or last name. You will be able to change your password anytime you want to in the future, you can do so by choosing the "modify settings" option in the Logan password dialog.

Defining the action on security alerts

You are able to define the action that will be performed when there is a security violation,

Display Alert Messages:

Will a pop up dialog be displayed when a security violation happens.

Play tone on alert messages:

Will a short tone be played when a security violation happens.

You will be able to change your settings anytime you want to in the future, you can do so by choosing the "modify settings" option in the Login password dialog.

Changing registration personal data

You are able to change your personal registration data.

You first need to obtain a serial number and a registration password.

You will get a personal registration password and a serial number when you register the software.

Check the help file on how to register.

You will be able to change your settings anytime you want to in the future, you can do so by choosing the "modify settings" option in the Login password dialog.

Configure security timeout

You are able to define a security time-out which means that you will be request to enter your password every 6 hours, this is very useful for people who leave their machine running overnight at the office or home.

You will be able to change your settings anytime you want to in the future, you can do so by choosing the "modify settings" option in the Logan password dialog.

Reminder Dialog

The Reminder Dialog appears after 30 days of usage of the software without registering it.

Please register the software, for instruction on how to register please see the help file.

Security alerts, access log information browsing

Whenever you log into the system and there were security violation while you were away, a summary of them all will be displayed, you will have the opportunity to check them up, copy them or delete them so will not see them the next time you log into the system.

What is a path expression with wildcard

A path is a more direct way to describe where a file, such as a document or program, is located on your computer or network. A path includes the drive, folders, and sub folders that contain a file, in addition to the file's name. Generally, a filename ends with a 3-letter "extension" that indicates what type of file it is.

For example, a filename ending in ".exe" is a program, and a filename ending in ".txt" is a text file.

A path expression with wildcard is a pattern for making string comparisons, with the path to the files on your disk.

Each file that its path+name match the wildcard expression, will get the security check.

If the path expression that you entered does not include a directory, it will match files in ANY directory.

The following table shows the wildcard characters you can use .

Character(s) in pattern Matches in expression

- ? Any single character
- * Zero or more characters

To specify a path

- n Type the drive letter, followed by a colon (:) and backslash (\).
If you do not specify a drive letter the path expression will apply to all drives, for example if you want to limit access to the private.doc file in the documents directory on drive C you can specify as a path expression "c:\documents\private.doc" specifying just "\documents\private.doc" means limiting the access also to the same file on the same directory on the other disks that are defined on your machine.
- n Type the names of the folders and sub folders that contain the file.
A backslash should precede each folder or sub folder name.
If you do not specify a folder (directory name) the path expression will apply to all folders, for example if you want to limit access to the private.doc file in the documents directory you can specify as a path expression "\documents\private.doc" specifying just "private.doc" means limiting the access also to the same file on all the other folders which exist on your machine.
- n Type the name of the file. A backslash should precede the filename.
You can specify a wildcard expression as the file name, for example if you would like to limit access to all the documents files in the documents directory on drive C you can specify as a path expression "c:\documents*.doc"

Displaying or Hiding Alert notification messages

A pop-up dialog with alert notification can be displayed, every time the security is violated, letting the current user know that he is violating the security. If you choose to hide this message, the access still will be denied, but no message will appear.

Playing tone on alert messages

A tone will be played with alert notification can be displayed, every time the security is violated, letting the current user know that he is violating the security. If you choose to silent this tone, the access still will be denied, but no tone will sound.

Logging access to specific files

You can choose to trace access to specific files, without denying the access itself. This is a very good option when you want to spy out what people are doing with your computer while you are away.

Configuring the security timeout

You can choose to configure a security time-out which means that you will be required for re-entering your password every 6 hours in order to continue gaining access to the files you have limited access too, this is useful when you leave your computer running overnight at your office or home.

Browsing the security alerts, access log information

When you log into the system after entering the correct password, if there were any security violations a summary of them will be displayed and you will be able to examine them.
