Notes.....

Hard drive size reflects a true megabyte size, manufacturers have a tend the formatted size by 1 million for size, I use the same formula as you 1k = 1024 bytes, 1 meg = 1024k. I take the number of heads times number the number of sectors times a sector size of 512k and then divide that b divide that by 1000. If you use Norton Utilities 5.x or 6.0 the format I the size reported by Norton's SI.

- (1) IDE drives use logical heads and cyl., figures may not reflect physical
- (2) Maxtor Colorado brand
- (3) Sold under Seagate Name
- (4) Can be formatted with 1224 cyls.
- (5) Has a high return rate in Houston area.
