WHAT IS FANSI-CONSOLE?

Technically, FANSI-CONSOLE(tm) is a complete replacement for the IBM or
compatible MS(PC)-DOS console driver as well as the screen & keyboard parts
of the ROM BIOS. More importantly to you, It has many features that make
the use of nearly every IBM-PC application program more convenient. It does
so many things, we also call it "The Integrated Console Utility".

WHAT DOES FANSI-CONSOLE DO FOR ME?

- Speeds up all screen writing done through MS(PC)-DOS or ROM BIOS calls from 1.2 to 3.0+ times, or from 1.4 to 8.0+ times with optional quick mode hardware scrolling! Includes the screen writing of ALL the standard MS(PC)-DOS commands such as TYPE, DIR, ECHO & MORE. Speedup amount depends on computer, display adapter type & application program.
- Provides a scroll recall facility which allows reviewing lines which have scrolled off the screen which you would otherwise lose forever! You can save up to about 800 screenfuls using Expanded Memory managed by any other device driver which meets the Lotus/Intel/Microsoft Specification. Or you can save less lines using some regular MS(PC)-DOS memory. You may save the scrolled line buffer to a file, or cut & paste into nearly ANY program, such as word processors. If not automatically saved, you can take a snapshot of a screen, You can save the lines in full color, or you can conserve memory & just save the characters.
- Adds zip to your cursor keys & other keys, up to 5 times typically!
- Adds a much larger typeahead buffer (255 characters)!
- Optional automatic single or dual screen display dimming (both screens in a two screen computer) after specifiable period of inactivity! Prevents burning patterns into your screen phosphors.
- Free your eyes from CGA scroll blinking!
- Provides many more ANSI X3.64 standard escape sequences than IBM's ANSI.SYS program! Space prevents us from listing them all here, ask about any you are specifically interested in. It supports nearly all the VT100 series escape sequences & many more! Has at least 50 extra private RM/SM mode settings and at least 15 extra private multivalue mode settings, giving full control over a multitude of screen & keyboard features (see below).
- A DEC VT100/VT52 emulation toggle which provides VT100 emulation when used with our MODEM86(tm) or many other communication programs!
- Programming support for separately scrolled windows via ANSI X3.64 escape sequences (SSR)!
- You can use the escape sequences with any programming language. Your program thinks it is writing to a ANSI or VT100 style terminal!
- Optional ANSI X3.64 sequences processed during BIOS TTY calls!
- Optional one finger pausing!
- Optional controls to change the behaviour of shifting & locking keys!
- Rearrange keys like switching Left-Shift & BackSlash!
- Optional Dvorak keyboard arrangement!
- Keyboard induced debugging breakpoints for assembly language programmers!
- Keyboard macros just like those in ANSI.SYS, with option to have them expanded all the time instead of just for MS(PC)-DOS calls! More memory for ANSI compatible keyboard macro strings than standard IBM-PC ANSI.SYS device driver allows! You can specify how much memory to use.
- Shorten bell time length!
- Add a key click!
- Extends IBM-PC screen & keyboard ROM BIOS to be IBM-PC AT compatible!
- Extends EGA ROM BIOS to be more VGA compatible!
- Control over colors used by many programs!

- Software support for 50 line CGA displays with interlace, or doubled scan lines with interlace for those screen adapters that have interlace hardware capability!
- Support for 43 line displays with Enhanced Graphics Adapters (EGA) & Enhanced Graphics Displays (EGD)!
- Software support for differing (larger) screen text dimensions for those compatible display adapters that have that hardware capability!
- So many other little features, they just don't fit here! Nearly every feature is optional and easily changeable using a menu driven program!
- Easy installation, just like MS(PC)-DOS ANSI.SYS. Place one line in the CONFIG.SYS file and MS(PC)-DOS automatically loads <u>FANSI-CONSOLE</u> every time you start MS(PC)-DOS.

WHAT IS NEW WITH VERSION 3.00 VS 2.00?

Version 2.00 is fully functional shareware. Version 3.00 is the commercial (not shareware) version with additional features and compatibility.

Revised and Improved User Manual

We have oriented the 250 page typeset User Manual for non-programmers. It has descriptions of features and options not requiring programming, examples, error message explanations, compatibility lists, a table of contents, and an extensive index. It comes with the basic software utility diskettes.

New Technical (/Programmers) Manual

We have oriented the 250 page typeset Technical Manual for programmers. It has descriptions of escape sequences, BIOS calls, macros, and how to redesign your keyboard's functionality, examples, a table of contents, and an extensive index. It comes with an additional diskette containing mostly example sources for keyboard description files.

DOS 3.3x and 4.0x Support
PS/2, VGA, Super-EGA, & some Super-VGA Support
50 & 60 Line VGA & Super-EGA Support
132 Column VGA Support w/Multisync Monitor
800x600x16 Color VGA Support w/Multisync Monitor
Enhanced 101/102 Key Keyboard Support For ALL Computers
Keyboard Input Faker "KEYIN"
Complete Keyboard Reprogramability
Foreign and Brand X Keyboard Support
Scroll Recall Keyboard Layout Improvements
Better Memory Usage
Many Other Minor Problem Fixes & Improvements

IS <u>FANSI-CONSOLE</u> COMPATIBLE WITH MY HARDWARE & SOFTWARE?

Compatible with thousands of existing programs. Supports all IBM compatible modes of operation on most "IBM-PC compatible" computers & adapters, including AT, 386, 486, PS/2, EGAs & VGAs. May not yet support some extended functions unique to specific compatibles.

WHY ORDER <u>FANSI-CONSOLE</u> VERSION 3.00 NOW?

WE GUARANTEE YOUR SATISFACTION OR YOUR MONEY BACK! Tens of thousands of
happy customers have used it since 1984! Try out it yourself! If you are
not satisfied with it for any reason, just return it with a copy of your
receipt to us within 60 days.

                    WHERE DO I BUY <u>FANSI-CONSOLE</u>?

<u>Order</u> <u>yours</u> <u>NOW!</u> Order the commercial version 3.00 directly from us; Or
from local dealers like Egghead Discount Software or Software Spectrum; or
from mail order dealers like Programmer's Connection, Programmer's Paradise
& Programmer's Shop. Although many software dealers do not yet stock it,
they will usually special order it if you ask. Order the shareware version
2.00 diskettes with an abbreviated on diskette manual directly from us or
any shareware outlet.

<u>FANSI-CONSOLE</u>(tm) Retail Price List
The Integrated Console Utility(tm)
Fast ANSI X3.64 Console Driver
for the IBM-PC and equivalent computers

Suggested retail prices effective starting 01/01/90:

Product	Part #	Price
<u>FANSI-CONSOLE</u> User Manual	FMN	$ 75.00
<u>FANSI-CONSOLE</u> Technical Reference Manual from User	FPM	$ 59.95
<u>FANSI-CONSOLE</u> Complete Package (FMN&FPM save $15)	FPN	$119.95
<u>FANSI-CONSOLE</u> Diskettes Only (must order a manual)	FDN	$ 49.95
<u>FANSI-CONSOLE</u> Diskette Master Serializer (*min 10)	FSN	$ 44.95
<u>FANSI-CONSOLE</u> Shareware Diskettes Version 2.00	FDR	$ 12.00
<u>REVISE</u> Complete Package	RMN	$ 39.95
<u>MODEM86</u> User Manual	MMN	$ 75.00
<u>MODEM86</u> Diskettes Only (must order a manual)	MDN	$ 49.95
<u>MODEM86</u> Diskette Master Serializer (*min 10)	MSN	$ 44.95

- Quantity discounts for multiple copies of same item: 1 @ 00%, 2-4 @ 15%, 5-9 @ 20%, 10-19 @ 25%, 20-39 @ 30%, 40-99 @ 34%, 100-199 @ 37%, 200-499 @ 40%.

- Buy both <u>FANSI-CONSOLE</u> and <u>REVISE</u> at same time and save an extra $10 off <u>REVISE</u>. Not applicable to quantity discounts.

- Prices are per unit, and per order of a given quantity, shipped to one destination.
- Discount quantities are NOT cumulative from order to order.
- Prices of updates vary depending on version updated. Contact us for update price list.
- We accept VISA, Master Card, and American Express with no surcharge.
- Add shipping and handling (for 1 copy): UPS Ground to continental USA $4, UPS 2nd Day to continental USA $6, UPS 2nd Day Alaska/Hawaii $8, UPS Next Day $15, Fed Ex Priority 1 $30, Fed Ex Std Air $15.
- Add additional shipping and handling charges for: Add $4 for COD. Add 5% ($5 minimum) surcharge for Net 30 Purchase Orders. POs require signed paperwork before shipment.
- Michigan residents add 4% sales tax.
- Foreign orders add shipping and handling charges for US Mail depending on number of manuals (1-3) (FPU/FPN has 2!): Canada/Mexico $9/$11/$13, Central Am $11/$14/$18, Europe/South Am/N Africa $13/$20/$27, Australia $22/$28/$34, Asia $16/$25/$35. All checks must be in US funds drawn from a US bank, or add $10 bank fee.
- Prices subject to change without notice.

"Diskettes Only" has a license to use software on one computer. Does <u>NOT</u> include manual on diskette, and requires that you buy at least one manual previously or concurrently. Includes serialized $45 discount coupon for Printed Manual.

"Diskette Master Serializer" ((*) minimum quantity = 10 serial numbers)
includes one master diskette set, labels, discount coupons, and serializing
program diskette, from which <u>YOU</u> make serialized "Diskettes Only" for each
serial number. Diskette Master Serializer thus gives the right to use
<u>FANSI-CONSOLE</u> on   number of computers equal to order quantity (<u>NOT</u>
unlimited). No restriction to location or ownership of computers. Diskette
Master Serializer does <u>NOT</u> allow duplication of our manuals!
