Labels - Printing One Page Of Multiple Labels

Problem:

Many customers try to print one page of multiple labels and find that only one label is actually printed. For example, a customer with a Labels Paper Size/Type of 3 columns by 10 rows might try to print one page of 30 labels by pressing Print (Shift-F7), Page (2). Because WP considers each label as a separate page, only one label would be printed on the page.

Solution:

To print all 30 labels, the customer must press Print (Shift-F7), Document (1); or press Print (Shift-F7), Multiple Pages (5), and type **1-30** or **-30** (for the number of "pages" or labels desired). If the customer had more than 30 labels in the document and only wanted to print one page (or 30) of the labels, the customer would need to use the Multiple Pages option.
