

This document tests use of WordPerfect 5.1 and 5.0 with WPINDEX. The differences between these two releases do not seem to affect WPINDEX.

Some people have told us that the 5.1 F5 function now is enhanced with Long display that shows the Document summary and that WPINDEX is not needed. While the WordPerfect function is useful we still think WPINDEX has a value because:

- It displays more than the 65 characters that 5.1 displays.

- It sorts out documents, backups and non-documents.

- It lets you sort both in alpha and reverse chrono

- It is faster (we think?)

now is the time for all good ment to come to the aid of their parties¹

¹This footnote is a test of peter's wpindex system
