Keyboard

The keyboard functions essentially the same as for any windows application. The only unique feature of the keyboard interface involves selecting items and launching applications. Use the left and right arrow key to move from item to item. Hitting return will execute the selected item.

Folder Commands

To get help with a command, choose the appropriate menu.

File Menu

- New
- Open
- Save
- Save Config
- Name
- Delete
- Exit
- Exit Windows (only visible if using as shell)

Edit Menu

- Add Item
- Delete Item
- Delete File and Item
- Delete Subfolder
- Move
- Copy
- Command Line
- Filename

Special Menu

- Item Name
- Item Icon
- Add Icon
- Delete Icon
- Set Default Icons
- Arrange Icons
- Preferences

Folder Procedures

The Procedure topics give you detailed instructions on using the commands available to a folder.

Working with folder items

- [Adding icons to a folder](#)
- [Adding items to a folder](#)

File Menu

New - This command create a new folder. This can be either a subfolder or a group level folder. Group level folders appear as icons in the group specified during the creation process. Subfolders appear as icons in the folder currently opened. Note that you can create subfolders in subfolders with essentially no limit on nesting folders within folders. Be sure and give each folder an unique name. Changing the case of a letter will not make a name unique.

Open - This command allows you to open or activate, if already open, any folder on the system, regardless of its location . This allows you to open a specific folder without having to hunt it up. The file currently open is not closed, thus allowing you to switch between it and any other folder you open.

Save - This command saves any changes made to the folder. Note that some commands will automatically perform a save when executed. They include delete subfolder, rename a subfolder, create a subfolder. Basically, any command that manipulates a subfolder will cause an automatic save.

Save Config - The current configuration of a folder may be saved using this command. The configuration includes the size of the folder, the position of the folder and the location of the items in the folder. Exactly which of these quantities are saved can be set using the Preferences command under the Special menu.

Name - Using this command, a group level folder may be renamed. It is grayed out in subfolders. Subfolders must be renamed by their parent folder using the Special menu command, item name. Note that the folder icon in the Program Manager group must also be renamed using the PM's properties command.

Delete - This command will delete the group level folder currently open. That is the folder from which this command is executed will be deleted. Like Name it only works for group level folders. Subfolders are deleted using the Edit menu command, Delete Subfolder from the parent folder. Two important points to note with this command are, first, no subfolders are deleted. To prevent having any unwanted subfolders left, they must be deleted before this command is executed starting from the lowest level. Second, the folder icon in the Program Manager group must be deleted using the PM's delete command.

Exit - Causes the current folder to be closed. If has not been saved, and changes have been made, you will be prompted on whether or not you want the folder saved.

Exit Windows - This command only appears if Folders is being used as the Windows shell. It allows the user to exit windows and may be executed from any folder, not just the shell folder.

Edit Menu

Add Item - Adds items to the current folder. A dialog box is presented from which you may choose any file on the system. After choosing, a descriptive name for the item must be entered. This is the name that will show up under the item's icon. An icon will then appear which represents the item just added. By double-clicking on this icon, the item may be executed.

Delete -

Item - This command removes the selected item from the folder. It does not delete the file associated with the item. It simply removes it from the folder. If multiple items have been selected, a prompt to delete or not appears for each item selected.

File and Item - This command removes the item from the folder and deletes the file associated with the item. As such, use it only when you wish to remove the file completely from the disk. If you wish to only remove the item from the folder, use the Delete Item command. This command does not function with subfolders. If multiple items have been selected, a prompt will appear as to whether or not to delete it for each item selected.

Subfolder - Use this command to delete a subfolder. Note that this command completely removes the subfolder. As such, if you have copied it to another folder and wish to be able to still access it from this other folder, use the Delete Item command to remove it from the current folder rather than this command. Also, any subfolders in this subfolder are NOT deleted. So be sure and delete these other subfolders, first.

Move - This command moves the currently selected item to the folder specified. In doing so, it is removed from the current folder. Note that if the folder you are moving the item to is open, it must be closed and reopened before the new item will appear. This commands will work on any item including subfolders. If multiple items are selected, all items selected are moved.

Copy - Works the same as move, but does not remove the item from the current folder. If multiple items are selected, all items selected are copied. Use this command to link two or more folders to the same subfolder. Simply create the desired subfolder using the File menu New command. Then copy the new folder item to whatever other folders you wish to be able to access it.

Command Line - Allows you to customize a command line for an item. Note that this command line takes precedence over the file name. That is, if you have an item whose file is LETTER.TXT and TXT files are associated with Notepad, normally executing this item would cause Notepad to be ran using the file as the data file. However, if you specify the command line as WRITE.EXE LETTER.TXT, the program Write will be ran rather than Notepad. By setting the command line to blank, the original functionality of the item will be returned. Note that any type of command may be specified on the command line.

Filename - This command shows the actual DOS file associated with an item. As the item name need not be at all similar to the file name, this command is useful to find out what the actual file is. The filename may also be edited thru the use of this command.

Special Menu

Item Name - This command allows you to rename items and subfolders. When renaming subfolders, an automatic save will be performed otherwise a save must be done to keep the new name.

Item Icon - Allows you to specify which icon is to be used to represent an item. This may be any icon that has been added to the folders system either thru the use of the Add Icon command or by being added thru the inclusion of an executable. See the Add Icon command for details. The item may be returned to its previous state by simply specifying a blank in the icon name field of the dialog box.

Add Icon - Folders comes with several built-in icons already available for use within a folder. However, using this command, almost any icon description file (usually ends in .ICO) may be added to the folder system for use within a folder. Once an icon has been added, it may be accessed using the Item Icon command or the Set Default Icons command. Note that icons associated with executables are automatically added to the folder system whenever a new executable or an item associated with a new executable is added to a folder. These icons are automatically named the same as the executable program and appear with an asterisk before their names in the icon selection dialog boxes. They may be used in exactly the same manner as an icon explicitly added using the Add Icon command.

Delete Icon - Removes icons from the folder system. Specify the icon you wish to delete from the dialog box. After deletion the icon will no longer be available for use within a folder. This command is provided to allow for the removal of icons that are no longer needed. It is recommended that it be used sparingly, as once an icon is removed, items that have had their icon explicitly set using the Item Icon command or the Set Default Icons command may appear with the incorrect icon. To correct this situation, simply set the icon to be used again. Also, note that once an icon or icons have been deleted, all open folders should be closed before continuing to use them. Any icon in the system, except for the built-in icons, may be deleted.

Set Default Icons - This command allows you to add or change the icons associated with specific extensions. Simply specify the extension, then choose the icon you want associated with it. Click on Set and the association will be recorded. Make as many associations as desired, hitting Set each time, then hit Done when finished. The new associations will not appear until the folder is closed and reopened. This is true for any folder that was open when the changes were made. Once set, any item with the specified extension will now appear using the icon associated with that extension. Any association made for an extension may be removed by simply specifying blank in the icon name field of the dialog box.

Arrange Icons - Arranges the folder icons in an orderly manner.

Preferences - This command allow the folder to be customized. What aspects of a folder that are saved when using the Save Config command may be set from this command. Also, the folder can be set to minimize or close on execution of an item in the folder. Auto arrange of icons can be turned on or off from this command. Note that if auto arrange is on, the icons will be re-arranged everytime the folder is resized or minimized. Finally, the icon to be used to represent folder may be set. Once a new icon is assigned to the program, all subfolders and minimized folders will appear using this icon. However, any folder icons in Program Manager groups will still need to be set by hand. Note that this function will only work properly from the first instance of Folders ran. In other words, exercise this option only from the first folder opened. If you are using Folders as the shell, use the option from the folder opened on startup.

Registering Folders

Folders is a shareware program. As such, you may use it on a trial basis for thirty days. After this time, the program should be registered if it is continued to be used. The total cost is twenty dollars. Registered users of version 2.x may upgrade to 3.x for ten dollars. The fee is payable to:

Sloop Software
6457 Mesedge Lane
Colorado Springs, CO 80919
(719) 260-0433

Be sure and specify your name, address, name of the program and where you obtained the program when registering. Also, specify 3.5" or 5.25" disk. Colorado residents, please add the applicable sales tax. Sorry, no credit cards.

Direct any comments to the above address or email to CompuServe 72540,144, Internet 72540.144@compuserve.com. Customer support is available to registered users and to unregistered users during their trial period.

A Japanese version is available from:

Personal Data Factory
Shinjuku yubinkyoku dome
160 Tokyo Japan

It includes a manual written in Japanese and costs 5000 yen. Customer support is also provided from Personal Data Factory.

License Agreement

No part of this manual may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language (natural or binary), in any form or by any means, except as described in the following license agreement or without the express prior written consent of Sloop Software.

The use of Folders is subject to the following terms and conditions.

Title To The Licensed Software

Title to the licensed software is NOT transferred to the end user. The end user is granted an exclusive license to use the software on a SINGLE computer or computer work station. EACH computer or computer work station must have its own licensed copy of the software.

Copyright Protection

Folders is copyrighted material. It is protected by the copyright laws of the United States, the State of Colorado, and other proprietary rights of Sloop Software. You may not make any changes or modifications to Folders or this manual. You may not decompile, disassemble, or otherwise reverse-engineer the software in any way.

You may make copies of Folders only under the terms of the section entitled "Limited License To Copy The Licensed Software".

You may use Folders on a trial basis provided you do not violate the protection afforded the licensed software by the copyright laws, and you agree to the terms of the license agreement. If you use Folders on a regular basis you are obligated to purchase it.

Limited Warranty

Sloop Software does not warrant that the licensed software will meet your requirements or that the operation of the software will be uninterrupted or error free. The warranty does not cover any media or documentation which has been subjected to damage or abuse by you.

The software warranty does not cover any copy of the licensed software which has been altered or changed in any way.

ANY IMPLIED WARRANTIES INCLUDING ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ARE LIMITED TO THE TERM OF THE EXPRESS WARRANTIES. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

Other Warranties

The warranties set forth above are in lieu of any and all other express or implied warranties, whether oral, written, or implied, and the remedies set forth above are the sole and exclusive remedies.

Limitation Of Liability

Sloop Software is not responsible for any problems or damage caused by the licensed software that may result from using the licensed software. This includes, but is not limited to, computer hardware, computer software, operating systems, and any computer or computing accessories. End user agrees to hold Sloop Software harmless for any problems arising from the use of the software.

Sloop Software SHALL NOT IN ANY CASE BE LIABLE FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, INDIRECT OR OTHER SIMILAR DAMAGES ARISING FROM ANY BREACH OF THESE WARRANTIES EVEN IF Sloop Software OR ITS AGENTS OR DISTRIBUTORS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

In no case shall Sloop Software's liability exceed the license fees paid for the right to use the licensed software, or a sum no greater than one Dollar (\$1.00), whichever is less.

Limited License To Copy The Software

You are granted a limited license to copy Folders ONLY FOR THE TRIAL USE OF OTHERS subject to the terms of this software license agreement described herein, and the conditions described below are met: Folders MUST be copied in an unmodified form and FOLDERS.ZIP MUST contain the following files:

FOLDERS.EXE	- The Windows executable program (shareware version only)
FOLDERS.WRI	- The program documentation
README.TXT	- Installation information
FOLDERS.INI	- Folders initialization file
FOLDER.HLP	- Folder help file
FLD0000.FLO	- Empty folder for manual installation process
FINSTALL.EXE	- Folders install program
ORDERFRM.TXT	- Folders order form

-> No fee, charge or other compensation may be accepted or requested by anyone without the express written permission of Sloop Software.

Public Domain Disk Vendors May NOT CHARGE a fee for Folders itself. However you may include Folders on a diskette for which you charge a nominal distribution fee. The purchaser of said diskette must be informed in advance that the fee paid to acquire the diskette does NOT relieve said purchaser from paying the registration fee for Folders if said purchaser uses Folders.

-> Operators of electronic bulletin board systems (Sysops) may post Folders for downloading by their users without written permission ONLY AS LONG AS THE ABOVE CONDITIONS ARE MET. A fee may be charged for access to the BBS AS LONG AS NO SPECIFIC FEE IS CHARGED FOR DOWNLOADING Folders files without first obtaining express written permission from Sloop Software to charge such a fee.

The above constitutes the license agreement for Folders. It supersedes any and all previous license agreements.

Notes on using icons

In order to use your own icons in a folder, they must be added to the Folder system. This can be done in one of two manners. The first way, and easiest way, is to simply add either an executable file with an icon in it or an item associated with an executable with an icon.

For example, if .TXT files are associated with Notepad, if you add either a .TXT file or NOTEPAD.EXE to a folder, the notepad icon will become available for use by the Item Icon or the Set Default Icons commands. In addition, any item with a .TXT extension will appear using the notepad icon after this. Note that the first time you do this, the folder will have to be closed and reopened before all items appear using their icon.

The second method involves using the Add Icon command under the Special menu. Using this command, you can add any acceptable icon description file. These files usually end in .ICO. Once an icon has been added, it can be accessed using the Item Icon or the Set Default Icons commands. You'll note that when using these commands, some icon names appear with an asterisk before them. These asterisks indicate icons that were added to the system from an executable in the manner described by the first method of adding icons.

Hierarchy of icons: There is a hierarchy involved in Folders deciding which icon should be used to represent an item. At the top-level, if an item has had an icon explicitly set for it using the Item Icon command, this icon will always be used regardless of any other settings made. Next, if the item does not have an icon set for it, but does have an icon associated with its extension, this icon will be used. Finally, if neither of the above is true, if the item is an executable or is associated with an executable, the icon for that executable will be used. If none of the above holds, the item will appear using the default icon, which is the DOS icon.

Limitations: There may be some cases where you wish to use an icon in an executable that is not the first icon in the executable. Folders cannot extract these icons itself (yet). There also may be cases where, for some reason, Folders just cannot find the icon in the executable (eg. WINWORD). In order to use such an icon, you will need to convert it into an ICO file using some utility such as Icon Manager. Once this is done, it may be added using the Add Icon command. In addition, Folders will not recognize two-color ICO icon files, only eight or sixteen color files (EGA,VGA) and Folders does not support CGA systems.

Should you be using a 256 color display and the icons are not displaying correctly, try this fix. In the FOLDERS.INI file, under [Defaults] should be a line that reads 'Color Mode=0'. Change the 0 to 256. This should allow the icons to display correctly. Note that Folders will only work in 256 mode now. To run in 16 color mode, change the number to 16 or 0, for auto-sensing of the color mode. If your INI does not have the color mode line, simply add it in to the [Defaults] section.

[Setting the default icons](#)

Using Folders as the Windows shell

Folders may be used as the shell for Windows in place of the Program Manager. In order to do so, two simple changes need to be made, one to SYSTEM.INI and one to FOLDERS.INI, using a text editor like Notepad. Both of these files should be in your Windows directory.

In SYSTEM.INI find the line that reads **shell=progman.exe** and change it to read **shell=folders.exe**. Note that if you are not using Program Manager, progman.exe will instead be the name of whatever program you are using. In FOLDERS.INI, find the line that reads **shell=** and, after the equal sign, add the folder name, not the DOS name, of whatever folder you wish to have open on Windows startup. Be sure and spell the name correctly or you may not be able to run Windows.

After making these changes, restart Windows. It should startup with the folder you specified in FOLDERS.INI open and any program listed in the load and run lines in WIN.INI appropriately executed. To protect yourself, you may want to make a backup copy of SYSTEM.INI before making any changes. This way, if there is a problem in starting Windows, all you need do is copy the backup of SYSTEM.INI over the changed version to return you to whatever shell you were using previously.

Using the Preferences command

1. Select Preferences from the Special menu.
2. From the dialog box presented, several options may be set to customize the folder as explained below.

Save Configuration options: When executing a Save Config command, the choices selected here will govern what information about the folder is saved. Information that can be saved include the folder size and position, and the position of the folder items. Any option not selected will not be saved. Note that performing just a Save will not save any of this information.

Minimize on use, Close on use options: Selecting one of these will cause the folder to be either minimized or closed when an item in the folder is executed.

Auto Arrange switch: When this option is activated, the folder item icons will automatically be rearranged whenever the folder is resized or minimized. If you wish to keep the folder items in specific locations at all times, do not use this option.

3. Once you have chosen the options you wish to be active for this folder, click on OK to return to the folder window. Note that a Save or a Save Config must be performed for the preferences to be saved.
4. Besides setting the options for the current folder, one may also set the default options that will be used whenever a new folder is created. Simply choose the options you wish to be used and click on Set Defaults. Any new folder created will automatically have these particular options already set. Note that the current folder will also now have these options.
5. If you wish to set a folder's preferences to whatever you have set as the default as explained in 4 above, simply click on Reset Settings. The folder will now have the same preferences as the defaults.
6. One other option may be exercised from this command. Clicking on the Folder Icon button allows the icon used to represent a folder to be changed to any icon currently in the folder's system. A dialog box is presented to choose an icon from in the same manner as the Item Icon command. Once the icon is set, all subfolders and all minimized folders will appear using this icon. Folder icons in Program Manager groups must still be set by hand. After executing this option, all folders should be closed to allow it to take effect.

Related Topics

[Saving a folder's configuration](#)

Adding icons to the folder system

1. Select Add Icon from the Special menu.
2. From the dialog box that appears, choose the icon file you wish to add. This file must be an acceptable Windows icon description file. These files typically end with an .ICO extension. Click on OK. You can preview the icon by clicking on Show Icon after selecting the icon file but before hitting OK.
3. Enter the descriptive name you wish this icon to be known as. This is the name that will appear in the list boxes of the Item Icon and the Set Default Icons commands. Click on OK.
4. Any icons added will now be available for use by the [Item Icon](#) command or the [Set Default Icons](#) command.

Note that icons associated with executable files will automatically be added to the system whenever the actual executable is added to a folder or when an item associated with that executable is added to a folder. It is not possible to specify an executable for the Add Icon command. Once an icon associated with an executable is added, it will appear as the same name as the executable but preceded by an asterisk. Any icon name with an asterisk before it is an icon obtained from an executable. These icons may be used in the exact same manner as icons explicitly added using the Add Icon command.

Creating a new folder

1. Select New from the File menu.
2. Enter the name of the new folder. This name MUST be unique. Upper or lower case do not make any difference.
3. Select whether you wish this to be a subfolder or a group level folder. Subfolders can only be accessed from the folder creating it. They appear as a folder icon in the parent folder. Group level folders are accessed from the Program Managers groups. They appear as a folder icon in the group selected.
4. If creating a group level folder, you will be prompted to enter the name of the Program Manager group you wish the folder to appear in. This can be an already existing group or an entirely new group. If it is a new group, the group will be created and the folder placed in it. Once a group level folder has been created, it can be moved from group to group just like any other group item.

Executing an item

1. Double-click on an item's icon to execute it.
or
2. Click on it with the mouse and hit the return key.
or
3. Use the left and right arrow keys to select the item. Hit the return key.

Exiting a folder

1. Select Exit from the File menu or Close from the System menu.
2. If changes have been made to the folder since the last save, you will be prompted for whether or not you wish to save the folder. Clicking on Yes will save and exit the folder. Clicking on No will exit the folder without saving. Clicking on Cancel will cancel the exit operation and return you to the folder.

Moving items from folder to folder

1. Select the item you wish to move by clicking on it with the mouse.
2. Select Move from the Edit menu.
3. From the dialog box, select the folder you want the item moved to. Click on OK.
4. The item will now be moved to the specified folder.

Note that if the folder being moved to is already open, the new item will not appear until the folder is closed and reopened. Also, if the folder is already open, do not save it before closing it or you will lose the move.

Resizing a folder

A folder may be resized in the same manner as any other window. However, once resized, the current size of the folder window may be saved by using the Save Config command providing this option has been selected using the Preferences command. If this is done, the folder whenever opened will appear the same size as the size saved. This allows each folder to be individually adjusted to the size desired.

Saving a folder

1. Select Save from the File menu.
2. All change made to the folder will be saved except for configuration information. Only the Save Config command will save this type of information.

Note that if the folder has been resized, when the folder is next opened it will appear as the same size as the saved size.

Saving a folder's configuration

In order to save a folder's size or position, or the position of the items in the folder, a Save Config command must be executed. The exact information saved is determined by the options selected using the Preferences command. Performing a Save command will not save any of the configuration information. Note that this command has the same effect as a Save command as well.

Setting an item's command line

1. Select the item whose command line you wish to set by clicking on it with the mouse.
2. Select Command Line from the Edit menu.
3. Enter the new command line you want to be ran when the item is executed. Click on OK.

Note that the command line must be entered exactly as if you were typing it at the DOS prompt. The path must be provided for the data file. The path for the executable need only be provided if it is not located in one of the directories specified in the Path= command in the autoexec.bat file. The command line entered takes precedence over any associations between the data file and executables that may have been established using the File Manager's Associate command. Entering a blank line will set the item back to its original functionality before the command line was set.

Setting the default icons

1. Select Set Default Icons from the Special menu.
2. Enter the file extension you wish to associate an icon with.
3. Choose the icon you want associated with the extension from the list presented. Click on Set.
4. Repeat the process for whatever extensions you desire. Click on Done when thru setting the defaults.
5. To see the new icons, close and reopen the folder.

Note that these associations will apply to all folders, not just the one they are set in. To clear an association, perform the above procedure, but do not specify an icon. This remove any association previously set.
