

DOS Information

This module provides information about the underlying DOS environment in which Windows is running. This information is important when Windows is running in Enhanced 386 Mode since this is the DOS environment which any DOS programs will inherit.

The following information is provided:

Version Numbers - The DOS version number and the mouse driver version (if installed) are displayed.

DOS Environment - The DOS environment include the PATH, PROMPT and any environment variables which may have been defined.

If Windows is running in Real Mode information about the DOS Device Drivers and Terminate-Stay-Resident (TSR) programs will also be provided. This information is not presently available in Standard or Enhanced 386 Modes.

Device Drivers - A list of the DOS Devices which are installed in the system and their attribute words.

TSR Programs - A list of the TSR programs loaded in memory and the amount of memory they occupy.
