

Network Information

This module provides information about the network connections for the system. The following information is provided:

User Name - The currently logged user's name as known to the network.

Specification Version - The version number of the Windows Network Specification supported by the network driver.

Driver Version - The version number of the Windows Network Driver.

Network Type - The type of the network. The following types are currently supported by Windows:

- Novell Netware
- OS/2 LAN Manager
- Microsoft Networks (NETBIOS)
- Banyan VINES

Network Disk Drives - A list of disk drives naming their local drive letter designation as well as the network name of the drive.

Network Printers - A list of printers naming their local "LPT" designation as well as the network name of the printer.

Network Driver Capabilities - A list of the capabilities of the Network Driver installed in the system. These qualifications do not represent the permission level of the user but rather the capabilities of the driver to control the network.

If no network software is found, a message to that effect will be provided in place of this information.
