Stealing a Tagline from the Screen
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
You can 'steal' a new tagline directly from any file, bulletin or
message currently on screen.

When you press T for Tagline Steal, a cursor appears on screen.

Position it over the first character of the string you want to
steal and press Enter.

Now move the cursor right until it is positioned over the last
character you want to steal and press Enter again.

The string thus selected is added immediately to your tagline
file (POWERQWK.TAG).
