

```
/bea1~  
{while a1<20,increment}
```

```
{let a1,a1+1}  
{tone 5,500}  
{goto a1}{edit}~  
{ret}
```

A sample use of the {while...} macro

~~~~~  
Alt-A to Start. Erase the counter cell  
While the value of cell A1 is  
less than 20, a call is made to  
subroutine INCREMENT.

-----  
This is subroutine INCREMENT, i.e.,  
Named range - INCREMENT. It  
increments the value in A1 by one.  
Note that the last command in the  
subroutine is RET so the pointer  
may return to the calling location  
in {WHILE...}. The {goto} and  
{Edit} combination is to force an  
update of cell A1.
