ABOUT THE EDITION

The **WinOnLine™ Review™ Shareware Edition** is published weekly by **Windows OnLine™**. It is dedicated to bringing you news and reviews on the latest files available to members of **Windows OnLine™ (BBS)** and the general community of bulletin board users. Print publications just can't match the *immediacy* of this electronic media. **Each and every week** we bring you the *newest shareware, freeware* programs and *features*, such as:

Windows Shareware Briefs - Quick and informative reviews of the **newest entries into the shareware and freeware market**. Are they good, bad or buggy? We'll give you useful details that will tell you if it's worth your download time!

New Files - Tasty extracts from the past week of **Windows** and **OS/2** files posted at **Windows OnLine™ (BBS)**. Now you will know about that **new graphics driver**, that **freeware update**, or discovered that neat **WAV** or new **FONT** file. All without sifting through files at several other on-line services, if they even have what you're looking for! For new DOS files, call **Windows OnLine™ (BBS)** to review our huge selection.

Feature Reviews - Hear about hands-on experiences with the inner workings of the some of the **newest shareware**, with full glorious and gory details of its ups and downs. Our experienced writers bring you perspective with their frank and honest reviews.

The WinOnLine™ Review™ Shareware Edition *is published weekly courtesy of the* **Windows OnLine™**

We hope you find this weekly publication of great value and interest and become a regular reader. We'd appreciate your comments and suggestions. Leave a comment (C) on **Windows OnLine™ (BBS)** at **1-510-736-8343** or write to,

Windows OnLine
Box 1614
Danville, CA 94526-6614

(Voice 510-736-4376)

Enjoy!

WINONLINE.INI

Welcome to the
WinOnLine™ Review™
SHAREWARE EDITION

WOLLY'S MAILBAG

Daniel Page, author of **VbReader**, wrote Wolly a letter about the **WinOnLine™ Review Shareware Edition**. Bob Gollihur reviewed his Windows off-line mail reader in **WOLRS #9**:

Dear Wolly!

I have just received your diskette containing the WinOnLine Review publication. I wish to thank you for sending it to me and to congratulate you on the concept. This is Wonderful! To have text and images seamlessly integrated like this, all indexed for easy access, shows the potential of GUI systems, especially the fact that it can be done so easily, without special software, etc. . . . I wish (other) Sysops would be more forward thinking and less anchored to the DOS world . . .

I also wish to thank you . . . kind words and positive review of my product, VbReader. I do have a couple of comments concerning VbAnsi. I agree that it lacks features. On the other hand, it is extremely accurate in displaying ANSI screens. A few days after you downloaded your kit, an update was released which allows VbAnsi to display animation and increased the accuracy of the rendering. . . . the fact that it is really a "freebie", I judged it to be adequate for distribution. In the near future I shall be porting the VbAnsi code to a "C" dll and hope to increase it's speed and functionality. As for VbReader, barring unforeseen circumstances, I will be providing many more enhancements in later releases.

The comments above are in no way meant to criticize . . . (the) review. I just wanted you to know my viewpoint on the matter, and let you know that VbReader and attendant programs will continue to improve!

*Thanks again,
Daniel Page*

Thanks, Daniel, for your comments and appreciation of the **WOLR Shareware Edition**. We hope that we will gain more Canadian readers as **WOLR** and **WOLRS** is even more widely spread around the BBS community.

And from a comment to the Sysop from Greg Reinacker of Winnovation:

I just uploaded ACCTMN12.ZIP -- this should replace ACCTMN11.ZIP. I noticed that you

reviewed Account Manager 1.1 in WOLR Shareware edition, #7 I think...take a look at the new version! It has much added functionality...

WOLLY WELCOMES comments from authors and readers alike about reviews and comments in the **WinOnLine™ Shareware Edition!**

DOUBLE THE FILES!

Wolly took a week off to have his toenails clipped. They were tearing up the carpet. ***Find two weeks worth of new Windows and OS2 files in this issue!*** DOS fans should call Windows OnLine to see the incredible number and high quality of DOS files which come in each week.

Enjoy!

CLEANUP

Hoover for the 'puter

Drive clogged??? Forget Drano, get Cleanup! Take Wolly's word for it, this is the **best file dupe destroyer yet**. Super interface, nice button bars to take you where you want to go quick. Scans across drives and merges the results. **Graphs** your fattest sub-directories. **Tags all 0-byte and BAK files** at a single click. Leaps tall buildings in a single bound! (Sorry, got carried away!) Download **CLUPW100.ZIP** (112K) and check it out. You'll be glad you did. Registration is **\$32.90** including shipping. Like the graphic? You can even get a "Hoover invented it . . . We made it Windows Compatible" T-shirt for \$19.95 more.

UNIQWK

QWK mail reader from Brazil

Brazil brings us an **international QWK packet reader**. UniQWK 2.0 is a reasonably competent QWK mail reader and provides the unusual ability to include messages with sounds recorded by yourself or from .WAV or .MID files. Wolly tested it by **including a WAV file** in his message to himself. The sound file is appended to the end of the tagline. The single line message with a 27K WAV file resulted in a 6500 byte upload. Your recipient must also use UniQwk to hear your message. However, if this craze catches on, Sysops will only end up further enriching the pockets of disk drive manufacturers or getting out of the biz. This could easily get out of hand. **It's cute, but as unnecessary as six line signatures** and two line taglines

in RIME packets.

UniQwk is otherwise a **pretty decent reader** and deserves a look-see. A button bar brings many of its functions within a click of the mouse. Multiple part (quote/reply) **messages are displayed in two colors**, and you can select the entire color scheme of the program. Other features of the system are automatic saving of new files and conversion of special characters from CP860/850, allowing correct message reading. ANSI messages are also supported. Configuration options include the ability to **rename or delete packets upon exit**, and bookmarks, the ability to remember where you left off, are another handy feature.

The program was thrown a bit by **Windows OnLine™**, since the huge number of conferences (650) exceeded UniQwk's capacity (512). It still delivered the goods, though the message designations (# of #) were bizarre. **UNIQWK20.ZIP** (135K) is an interesting reader that Wolly will continue to play with. **He will not, however, use the multimedia aspect** since it, **a.)** only works for other UniQwk users, and **b.)** is a file and upload fattener the BBS world can do without. Registration is **\$30.00**.

ICONBAR

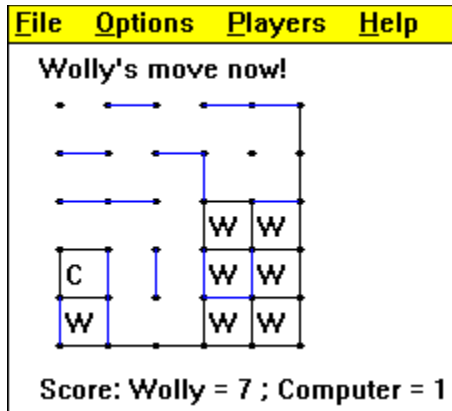

Minimalist shareware

Icon Bar resides in the lower right corner of your screen and gives instant access to the four obvious programs as shown. There's also a COMMAND.PIF you can edit to customize your DOS entry. That's all. **ICONBAR1.ZIP** (76K) is **\$5.00**. A programming exercise that should've stayed in the gym.

DOTS

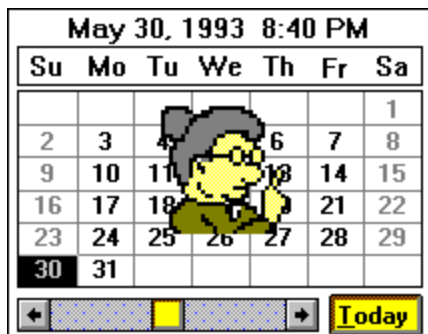

What DID we do before Nintendo??

Remember the pencil and paper game of dots? (NO, not another of the *Nintendo Generation!* You probably don't even remember Pong.) You alternately connected dots followed by an opponent; if you finished off a box you get to put in your initial. Whomever had the most boxes at the end won! Dots is a computer version of the game where you can play against the computer or another human (or Wolly). Select a 5x5, 10x10 or 15x15 matrix, and box away with [DOTS20.ZIP](#) (39K). Registration requires only a [postcard](#) or E-mail to the author, who will also kindly accept donations.

MOM FOR WINDOWS

OH NO! Talk about a *Personal Information Manager*

I love it when you click on the "About" selection under Help: Little old Mom waggles her finger at you! This **little MOM PIM** packs some nice features within its little calendar face. An **event database** with notification is provided along with a **name, address, and phone number database** with dialer. The **alarm interface** is most intuitive, with an option to set the number of days in advance of the event you need warning. You do have to make a few edits to the MOMWIN.INI file (how primitive!) but it's a pretty good bargain in a mini-PIM for **\$10.00**. Download dear old [MOMWIN.ZIP](#) (92K) and see what you think.

LOOK AND LISTEN ANIMALS

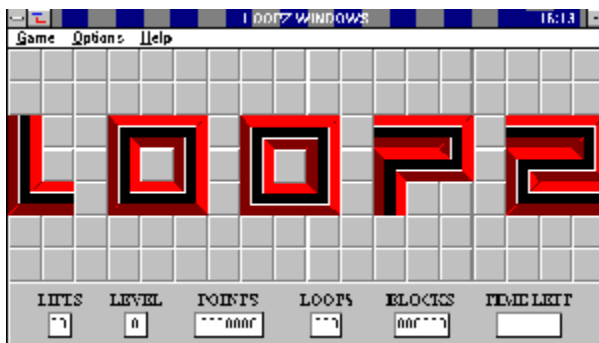

Rough around the edges, but will the kid care?

Precious little shareware is issued for "little precious". The **Look and Listen™** series recently posted on Windows OnLine includes a number of audio-visual distractions for your very own wunderkind. This example combines an audio introduction and description of each of the **ten animals** as they appear on the screen. Audio is okay, but the illustrations are pretty rough, and may or may not also have the name of the animal printed within the picture. The Look and Listen™ series consists of additional modules including 123, ABC, Colors, Shapes, Opposites, and Dinosaurs. Registration for the seven programs in the series is \$39.80. If you have little ones you might want to download **LOOKANIM.ZIP** (328K) or one of the other flavors of kiddie komputer koddlers listed in the New Windows Files section of **WOLRS**. Registration is **\$13.95** (\$9.95 plus \$4.00 shipping) for this one.

LOOPS

Francais loop de loop

This game from across the pond is **great fun!** The author makes a deserved parallel to Tetris. Instead of falling blocks, you are presented with a piece which can be rotated as with Tetris, but **your objective is creating "loops"**, a shape that eventually connects. Once made, the completed loop disappears with a bizarre sound. Simple in concept as Tetris, and just as addictive. You'd *better* be addicted, since once you've begun the game there is no way to exit until your time and lives have run out (doesn't take very long at idle). After a bit, larger pieces appear to really puzzle you (pun intended); you can adjust the game level to beginner if need be. **Wolly had fun with this one**, and suggests you give it a try. **LOOPZ11.ZIP** (110K) is **freeware** from Christopher Yvon of Sceaux, France.

DISK LINE

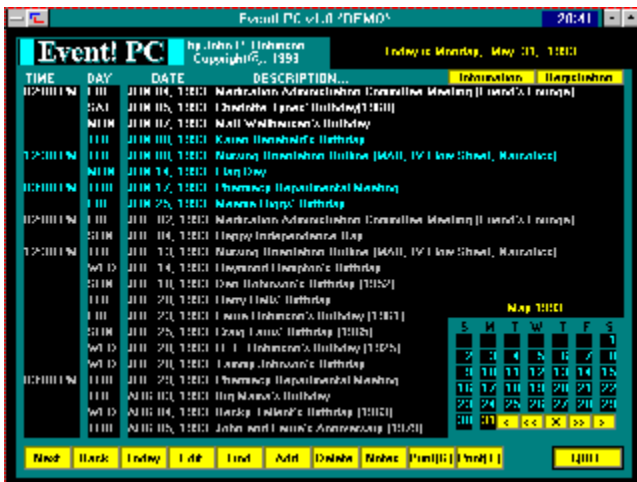

And this is a line if I ever heard one!

The illustration shown will approximate the amount of space used on up to two of your hard drives, C through H. Wolly had about 2 megs available on his 245 meg drive D despite the display. The display appears at the lower left side of your screen. It cannot be moved. There are no other options. Hazard Soft registration for Disk Line is "a modest \$20.00". *Disk Line* is modest (embarrassingly so), and \$20.00 is *ridiculous*. **DIL102.ZIP** (17K) does not include the required **BWCC.DLL**, either, but the author generously makes it available from his support BBS. Whatta guy! Seeing this next to the previous freeware package kinda ticks Wolly off.

EVENT! PC

For Big Picture People

How about a **good reminder of what's coming up in your life**? We're not talking about a full-featured PIM or appointment calendar. Just a **broad-brush view** of upcoming obligations, occasions, and otherwise important events. Picture the screen at left full-screen, with a handy flexible calendar image in the corner, and brief lines, along with an optional times, reminding you of "what's happening". No more excuses? Event! PC may just be the ticket if this kind of limited but meaningful image fits your lifestyle. **EVENT!PC.ZIP** (30K) is **\$9.95**.

CHART TAMER

Actually might

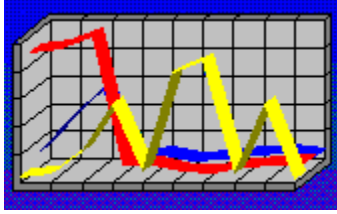

Chart Tamer can create some pretty good looking **presentation graphics** from data you enter or import via a standard tab-delimited file. Pies, bars, 3-D, Gantt and six others are supported. Change colors, save your creation as a bitmap file. Produce labels, titles, legend, etc. VERY nicely done, with very clean results, with a button bar for quick access to most options. Registration for [CTAMR2.ZIP](#) (399K) is **\$52.95**, so you'd better have cash flow to chart to be able to afford to register.

ICON MANAGER

For when your icons become unmanagable

Icon Manager is a great tool for the icon fans in the crowd. There's not a better tool to play with icons in Wolly's opinion. Retrieve icons from ICA archives, or from within DLLs and EXEs. In fact, one of the new capabilities is to replace the icon within an EXE using drag and drop. Neat, eh? A great feature of the program is the ability to capture a screen area and save it as an icon. Jump via OLE to Paintbrush to edit it. Icon Manager is right at the leading edge with full drag and drop capability as well as DDE (Dynamic Data Exchange) capabilities. This is an old favorite that doesn't get older -- it just keeps getting better and better and takes advantage of the Windows technology as it grows. Already it's won an award for its NT version! Icon fans should download [ICM32.ZIP](#) and register it for **\$24.95**. It's well worth it.

Enjoy!

Disk Factory

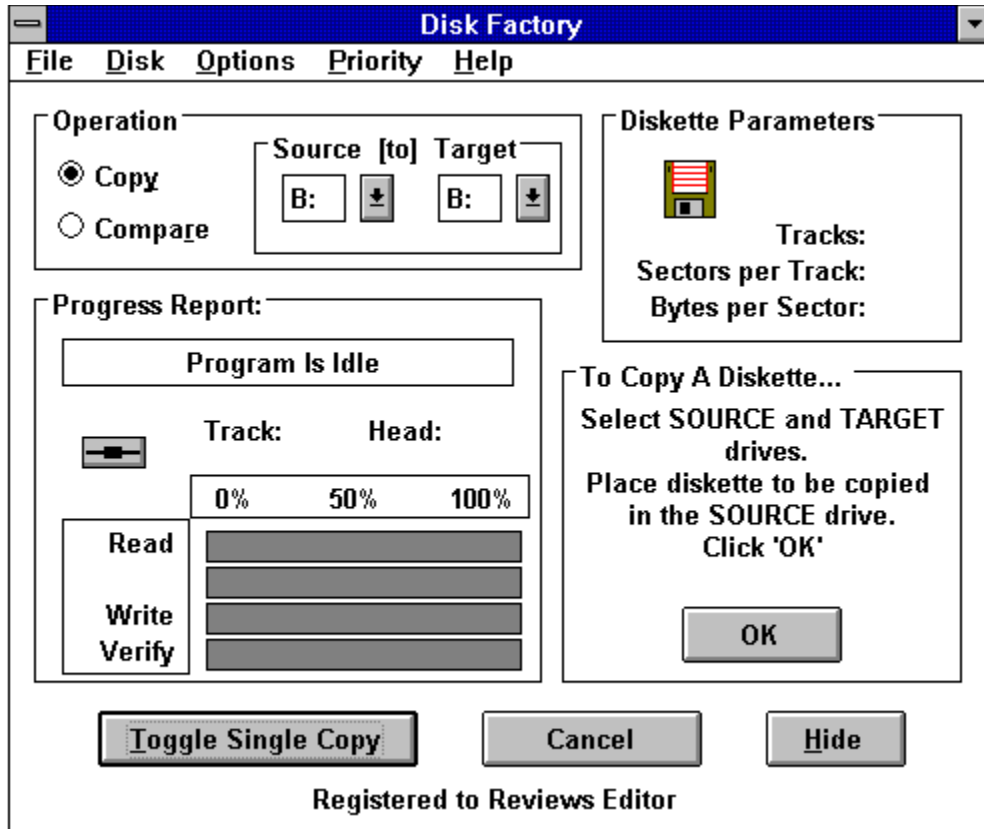

Disk Copy

Copying Floppies with Windows

Once I open the shrink wrap on a software package, my first step is copying the program disks. Many programs suggest you perform this step in their installation instructions. Those who ignore this advice are living very close to the edge. I can assure you, the first time your program disks get damaged, you'll wish you had a backup copy. I've found that the copy feature of DOS does have a few severe limitations. When copying high density disks, you'll need to swap between the source and target disk a few times to complete the copy. While Windows 3.1 does change this, I've noticed that the copy speed of the Windows copy feature is pitiful. In fact I'll bet you can watch your finger nails grow while waiting for either DOS or Windows to copy your disks. But, despite these limitations, the one feature both DOS and Windows lack is a multiple copy capability. So, to make more than one copy of a disk you'll need to re-copy the source disk for each copy you want. Since I make at least two copies of all my program disks, this limitation is a real pain in the disk drive. To overcome this deficiency I had to get out of Windows and revert to a disk copy program for DOS. To resolve this problem I started looking for a shareware disk copy program for Windows. After looking at several different copy programs I've found two that you may wish to take for a test drive. These programs are the *Disk Factory* and *Disk Copy*.

Disk Factory

The *Disk Factory* program is a fast multitasking copy/compare/format utility program for Windows. Rather than staring blankly at the computer screen as you copy disks, the *Disk Factory* program allows you to make as many copies as you need, in the background while you get on with your normal work. The only time you'll know it's working is when the program needs you to change the disks.

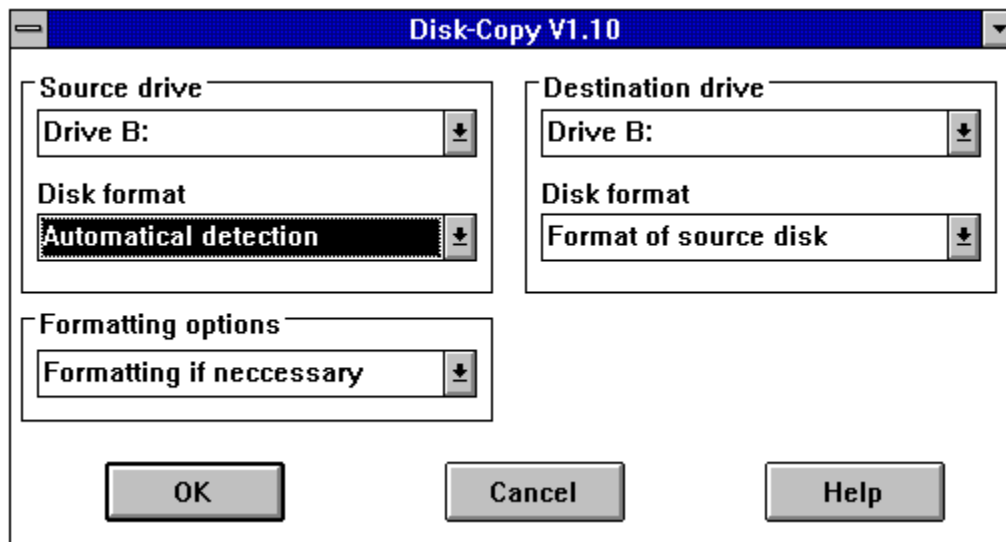

Using the *Disk Factory* is a simple matter of selecting the floppy drives for the Source and Target disks and either single or multiple copies. If you want only a single copy of the Source disk, then click the **Toggle Single Copy** button. If you need several copies of the same disk, simply click on the same button to change to **Toggle Multiple Copies**. The OPERATIONS box allows you to select the specific type of operation you wish to perform. The default is Copy, but you can also select the Compare button to check the contents of two disks.

Another very useful feature of the program is its ability to create an *.IMG file on your hard disk. If you have a particular disk you frequently copy to floppies this feature allows you to copy the disk one time and thereafter make as many copies as you need, without first copying the source disk. To use this option simply select the IMG option in the Target drive. The source disk is then copied to a file with an IMG extension. Once copied, a Save As box appears and allows you to name the file. To copy the IMG file to a floppy, simply select the IMG option in Source drive. The program then prompts you for the name of the IMG file. Once selected, the copy is made the same as with two floppies.

Disk Factory (Registration fee: \$29.95 Shipping & Handling included)
 CheckBox Software
 One Leary Drive
 North Brunswick, NJ 08902

Disk Copy

Disk Copy is a simple and direct method of copying any number of floppies. The program was originally written to overcome the disk copy deficiencies of Windows 3.0, but works quite well with Windows 3.1. The program will copy any disks from 160 KByte to 1.44 MByte without repeated disk changes. In addition, *Disk Copy* will also format the destination disk during the copy process.

The program will also automatically determine the format of the source disk. The format of the Target disk may also be selected. Even disks not written with DOS can be copied by manually setting the disk format parameters. The *Disk Copy* program will also automatically determine the number and the type of the available disk drives (3½ inch, 5¼ inch) on your system. The copies may be made directly or copied to a file on your hard disk. If copied to a file, the information may then be copied to a floppy disk as needed. When copied to the hard disk, the source disk is set for the floppy drive and the target is set for **Writing to hard disk**. When retrieving the information the Source disk is set to **Reading from hard disk** and the target is set to the proper floppy drive.

Disk Copy (Registration fee: \$20.00)

Joe Feise
Obstallee 10
D-1000 Berlin 20, Germany

While this type of program may not be something you'll use every day, when needed they can save you a considerable amount of work. Members of Windows OnLine can find *Disk Factory* as DISKFAC.ZIP in Directory #31 - (WINDOWS-Files/Shells/Add-In A-G) and *Disk Copy* as DCOPY110.ZIP in Directory #150 - (WINDOWS-New Uploads).

Mom for Windows

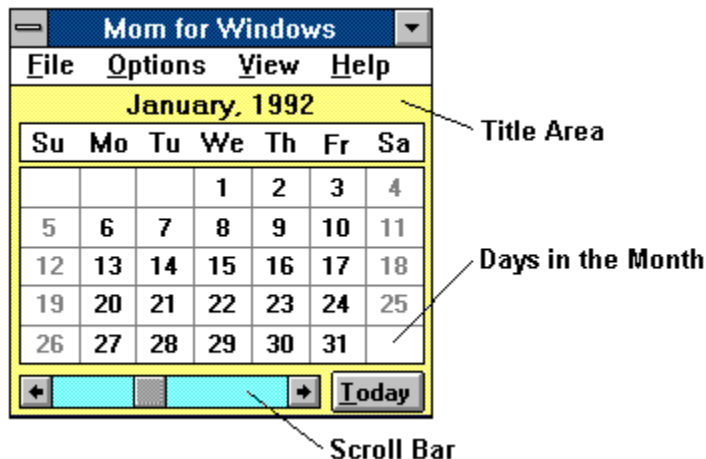

Version 1.00 - December '92

Copyright © 1992 Kyle Lutes

Reviewed By Rich Young

Mom for Windows is a Personal Information Manager (PIM) that you can use to remind you of important things you need to do, and to remember names, addresses, and phone numbers. Mom is a simple program that does not take a lot of time to learn. This program is most likely just enough for the average user. Most PIMs are overwhelming and more complex than one would want, but Mom for Windows may be just right. It includes:

- o A **Calendar**
- o An **Event Data Base** with alarms
- o A **Names Data Base** that stores names, addresses, phone numbers (and has an autodialer)
- o and a **Note Editor**

The Calendar window is the main window in the application. From it you can:

- Add an Event**
- Add a Name**
- Find a Name**
- View the calendar for any month**
- Display the Note Editor**
- Display the Names Viewer**
- Display the Event Viewer**
- Minimize all windows in the application**
- Exit the application**

The Calendar window consists of:

Title Area

Displays the name of the current month and current time, or just the name of the month being displayed if it is not the current month. The contents of this area can be changed by changing the settings in the Options menu.

Days in the Month

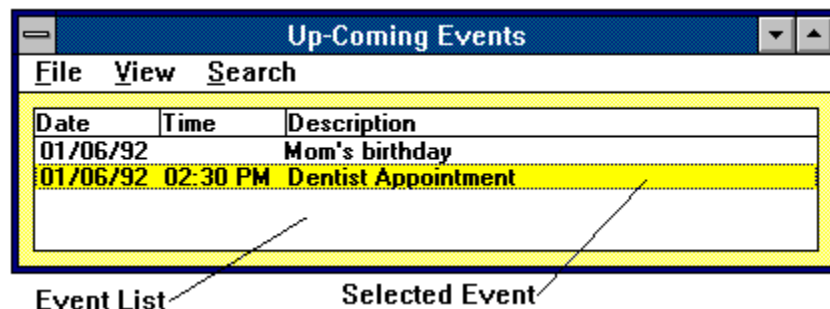

Displays the days in the month selected. Double-click any day to display the **Event Viewer** showing all events for that day. Holding down the shift key and double-clicking any day will allow you to add an event for that day. You can also use the arrow keys to highlight any day in the month. Pressing enter and shift-enter will display the **Event Viewer** showing all events for that day and allow you to add an event for that day, respectively.

Scroll Bar

Clicking the scroll arrows scrolls the calendar one month at a time. Clicking the scroll bar scrolls the calendar one year at a time.

Today

Click this button to display the current month with the current day selected. If the **Event Viewer** is visible, clicking this button will also change it to display Today's Events.

The Event Data Base is manipulated using the Event Viewer. From it you can view, add, update, and delete events. An event can be an anniversary, birthday, appointment, holiday, meeting, or any other special event you need to remember. Events can have times and you can set an alarm to go off to remind you of the event.

Click an event from the Event List to select it. You can then use menu commands to update or delete the event. Double-clicking an event displays the Update Event dialog box so that you can view and update its detail information. The Update Event dialog box also allows you to delete the event.

The Event Viewer has four modes:

Up-Coming Events

Displays all up-coming events.

Today's Events

Displays all events for today.

Selected Date's Events

Displays all events for the date currently selected on the Calendar.

All Events

Displays all the events.

Add an Event

From the Calendar or Event Viewer File menu choose Add Event or double-click a day in the Calendar while holding down the shift key. The Add Event dialog box is displayed.

The Add Event dialog box consists of:

Desc

An event description must be entered and can contain up to 60 characters.

Date

An event date must be entered and has a mm/dd/yy format. The date is automatically formatted as it is typed. The date defaults to the date selected on the Calendar window. You can use the spin buttons or the arrow keys to scroll the date forward and backward by one day.

Type

The type of the event. Available types are:

- Once**
- Daily**
- Weekly**
- Monthly**
- Yearly**

An event type of Once, is removed from the data base based on the RemoveEventsDays

setting in the MOMWIN.INI file. All other event types are automatically rescheduled depending on the event type.

Early Warning Days

The number of days before the event occurs that you want to be notified. The Event Viewer displays Up-Coming Events using this value. For example, to display an event five days prior to the event, enter 5 here. This value defaults to the value indicated by the EventEarlyDays setting in the MOMWIN.INI file.

Time

The time of the event. The time is optional and has a format of hh:mm. The time is automatically formatted as it is typed. You can use the spin buttons or the arrow keys to scroll the time forward and backward by the EventScrollMins setting in the MOMWIN.INI file.

Alarm

Set this option if you want an Alarm dialog box to display to notify you of the event.

Beep

Set this option if you want an Alarm dialog box to beep when notifying you of the event. The alarm will beep the number of times specified by the NbrAlarmBeeps setting in the MOMWIN.INI file.

Early Warning Minutes

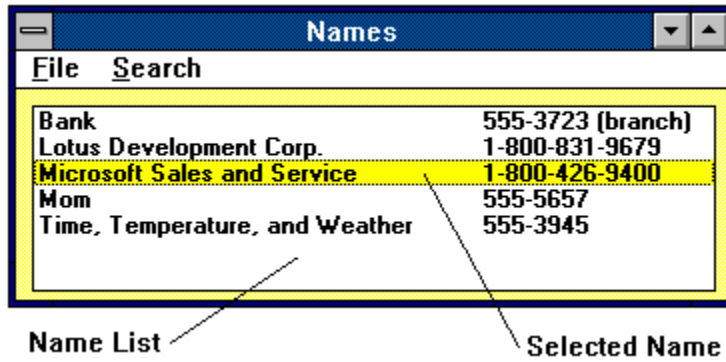

The number of minutes before the event occurs that you want to be notified. For example, to display the alarm dialog box 15 minutes prior to the event, enter 15 here. his value defaults to the value indicated by the EventEarlyMins setting in the MOMWIN.INI file.

OK

Adds the event to the Event Data Base.

Cancel

Removes the Add Event dialog box without adding the event.

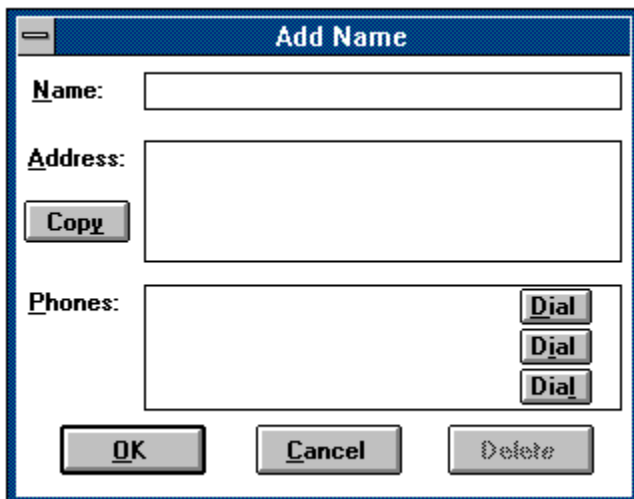

The Names Data Base is manipulated using the Names Viewer. From it you can view, add, update, and delete names. The Names Viewer lists names and phone numbers. Entries are listed in alphabetical order.

Click a name from the Name List to select it. You can then use menu commands to update or delete the name. Double-clicking a name displays the Update Name dialog box so that you can view and update its detail information. The Update Name dialog box also allows you to delete the name and automatically dial the phone numbers.

Add a Name

From the Calendar or Names Viewer File menu, choose Add Name. The Add Name dialog box is displayed.

The Add Name dialog box consists of:

Name

Each name can contain up to 30 characters.

Address

Three address lines can be entered. Each address line can contain up to 30 characters.

Phones

Three phone numbers can be entered. Each phone number can contain up to 20 characters.

Copy

Copies the name and address to the Windows' clipboard.

OK

Adds the entry to the Names Data Base.

Cancel

Removes the Add Name dialog box without adding the entry.

Dial Buttons

Sends instructions to the modem to automatically dial the indicated phone number. Modem settings are defined in the MOMWIN.INI file. The Dial Buttons are only visible when a phone number has been entered.

In Conclusion

I found Mom For Windows to be easy and fun to use. It has most of the features I want in my day to day needs. Those who are very active with heavy scheduling needs may find Mom a little too limited, but the majority of users will find Mom an asset to their productivity. Best yet, the program only costs \$10.00 to register, a real bargain. I give Mom For Windows a hearty thumbs up, for a job well done.

Notice:

Windows OnLine (BBS) makes every effort to identify and to post only shareware, freeware, demos, working models and drivers (software files and programs) for it's membership which are intended for free public distribution. Due to the lack of documentation and other descriptive files contained within certain archives, it can be quite difficult to identify and remove improper and otherwise copyrighted files and programs from our file listings.

It is the policy of Windows OnLine (BBS) not to allow such improper and illegal files and programs on the BBS, at any time. Our Readers and Members are asked to cooperate with us in our efforts to identify such improper files and to assist WOL in its efforts to remove ANY inadvertent inappropriate file postings.

Thank You.

OS/2 THE LATEST OS/2 FILES

The following file listings became available on Windows OnLine two weeks prior to the issue date, and may not yet be available on some bulletin board systems. Many more files were added to our library during that time, but only files of recent date are listed here. Members of Windows OnLine can download WOLRECNT.ZIP or use our mail door to obtain a complete listing.

Notice:

Windows OnLine (BBS) makes every effort to identify and to post only shareware, freeware, demos, working models and drivers (software files and programs) for it's membership which are intended for free public distribution. Due to the lack of documentation

and other descriptive files contained within certain archives, it can be quite difficult to identify and remove improper and otherwise copyrighted files and programs from our file listings.

It is the policy of Windows OnLine (BBS) not to allow such improper and illegal files and programs on the BBS, at any time. Our Readers and Members are asked to cooperate with us in our efforts to identify such improper files and to assist WOL in its efforts to remove ANY inadvertent inappropriate file postings.

Thank You.

This listing is as of March 1993 and is presented as an example of the tremendous number of WOL directories and files available to members. Remember, these are clean file listings, purged of useless duplicates or obsolete files. Windows OnLine™ works hard to gather the best and latest for its members!

Windows OnLine™ brings
THE BEST AND LATEST FILES

NO JUNK - we obtain the files ourselves, screen them thoroughly and edit their descriptions

THE LATEST FILES and MORE FILES - we get them EVERY DAY!

MINIMAL DUPES - we clear off the old when we bring on the new

EVIDENCE: Scan the **NEW FILES LISTINGS** in this issue. This is just our Windows and OS/2 files. Twice as many DOS files come in each week in addition to the quality and quantity you see here.

NOW, LOOK AT THE SIZE AND NUMBERS OF FILES in our listings:
