

## **Installation Completed**

The application has been installed successfully and it is ready to run.

Should you want to uninstall this application, you can double click on the icon named "Uninstall" in the program group.

Click on "OK".

## **Install Individual Files**

You can select the individual files in the list box and then click the "Install" button to install them. Then you will be prompted for the target directory. When you are done, click the "Close" button to close the dialog and end the installation.

## **Enter Program Group Name**

Enter a name for the new program group that will be created to hold the Program Manager items for this application. If you like, you can also select one of the existing groups from the list so that the items will be put there and no group will be created.

## **Existing User Information**

The package has been installed by another person whose information is displayed below.  
This information cannot be changed or deleted.

Click on "OK" to continue the installation.

## **Enter User Name, Company Name and Serial Number**

Please enter your name, your company name and serial number here. The name you enter must be at least four characters long.

Click on "OK" to continue the installation.

Click on "Cancel" to abort the installation.

## **Welcome with Single File Mode**

This program will install the files onto your system and create the appropriate icons for you in Program Manager.

Click on "Install" to start to the installation.

Click on "Don't Install" to return to Windows without further action. Your system won't be changed in any way.

Click on "Single File" to select individual files to install. This is not the recommended way to install the application. You should do it for example only when some files in your existing installation are corrupted or missing.

## **Restart DOS**

Your AUTOEXEC.BAT and/or CONFIG.SYS have been updated. As a result you need to restart DOS for the changes to take effect.

Click on "Restart" to reboot your computer.

Click on "Stay Here" to stay in Windows. You should not run the application just installed until the next time you turn on your computer.

## **Restart Windows**

Your Windows system files have been updated. As a result you need to restart Windows for the changes to take effect.

Click on "Restart" to restart Windows.

Click on "Stay Here" to stay in Windows. You should not run the application just installed until the next time you enter Windows.

## **Enter Install Target Directory**

Here you enter the install target directory, i.e., the directory into which the files will be copied.

Click on "OK" to install the software to that directory you just entered.

Click on "Cancel" to abort the installation.

## **Version Attribute Incompatible**

Usually this means that you are trying to install a file with different language or character set from your existing file. The detailed attributes of the new file are shown in the left side and those of the existing file are shown in the right side.

Click on "Copy" to copy the file.

Click on "Skip" to not to copy the file and continue with the installation.

In this situation, it is recommended that you edit the target path and then choose "Copy" to install the file under another name.

## **Abort Installation**

You are going to abort the installation!!!

Click on "Yes" to abort the installation.

Click on "No" to continue the installation.

If you abort and some files have been installed, the uninstaller will be started to undo the partial installation.

## **Insert Disk**

The next distribution disk is needed. Please insert the disk labeled as requested into the drive.

Click on "OK" to continue the installation.

Click on "Cancel" to abort the installation.

## **Enter User Name and Company Name**

Please enter your name and your company name here. The name you enter must be at least four characters long.

Click on "OK" to continue the installation.

Click on "Cancel" to abort the installation.

## **Welcome**

This program will install the files onto your system and create the appropriate icons for you in Program Manager.

Click on "Install" to start to the installation.

Click on "Don't Install" to return to Windows without further action. Your system won't be changed in any way.

## **Installation Help**

We are installing the application onto your system.

If you are confused, please contact your system manager.

## **Installation Aborted**

Installation has been aborted. If some files have been installed, the uninstaller will be started to undo the partial installation.

Click on "OK" to quit.

## Select What To Install

This is where you select which parts of the application that you would like to install.

Click on the check box to the left of a component to select (install) or deselect (not install) it.

Click on the plus (+) sign to expand a component to see what is in it. Then the plus sign will change to a minus (-) sign, on which you can click again to collapse the list. If there is no plus sign or minus sign there, but just a small dot, then there is nothing else in the component except itself.

Click on the text part of an item to see the detailed description on it in the window labeled "Description".

The following information is also shown:

1. The total size of the current selection.
2. The total size of the whole application.
3. The available hard disk space.

It is recommended that you choose "Typical Install" or "Maximum Install" whenever available. Choose "Custom Install" only when you know what you are doing.

Click on "OK" to continue the installation.

Click on "Cancel" to abort the installation.

## **Modifying DOS System Files**

We are going to modify AUTOEXEC.BAT or CONFIG.SYS.

The current (unmodified) contents of the file are shown on the left side and the proposed contents are shown on the right side. You can inspect and/or edit the proposed contents if you know what you are doing.

Click on "Save" to update the file and backup the original. You can specify the name of the backup in the edit control "backup as".

Click on "Don't Save" to not to update and keep the original untouched. **THE APPLICATION MAY NOT RUN AFTER INSTALLATION.**

It is recommended that you choose "Save". If something goes wrong later, you can either use the backup to restore the system or uninstall the application.
