

Known Limitations

uuMon has only been tested under NeXTSTEP 2.0, 2.1, and 2.2. I don't know if it will work under 1.0 or 3.0.

uuMon currently works with the NeXT supplied uucp.

uuMon does not recognize when cron runs and resets the uucp log files during a single execution. When this happens, all logging activity in **uuMon** breaks. The polling and copying features still work but nothing is reflected in the logs. The situation is easily remedied by quitting and restarting **uuMon**.
