

# FCList

**Inherits From:** FCUnsortedCollection : FCOrderedCollection : FCCollection : Object

**Declared In:** FCList.h

## Class Description

FCList is a subclass of FCUnsortedCollection that implements an unordered collection in which the entries need not be unique.

FCList is the collection most like NeXT's List class, except FCList has more methods. Use FCList in the situations you might use List, but need something more robust.

FCList inherits from FCUnsortedCollection, FCUnorderedCollection, and FCCollection. FCList defines no new methods, but all the methods in its superclasses will work on an FCList as well. Refer to the documentation on those classes to complete the description of an FCList.

## Instance Variables

*Inherited from Object*

None declared in this class.

*Inherited from FCCollection*

id **\_fc\_contents** ;

Class **\_fc\_class** ;

SEL **\_fc\_sortSelector** ;

BOOL **\_fc\_archiveByReference** ;

*Inherited from FCOrderedCollection*

None declared in this class.

*Inherited from FCUnsortedCollection*

None declared in this class.

*Declared in FCList*

None declared in this class.

## Method Types

No additional methods in this class.
