The directory has the following packages:

1. **Quantrix.pkg:**   This package contains Lighthouse Design's powerful multidimensional spreadsheet.   It can be installed in either /LocalApps or ~/Apps.

2. **QAPI.pkg:**   QAPI is the Application Programmer's Interface to Quantrix. This package contains headers, documentation and examples.   Please note: If you install this package anywhere other than your ~/Library, you will need to modify the makefiles in the example projects as well as in the QAPI/Makefiles directory.

All these packages can be installed using NeXT's Installer Aplication.
