Dead Bolt Lock/PC

<u>Page 1</u>

Licence:

Dead-Bolt Lock/PC (DBL/PC) is not free! DBL/PC is copyrighted by Adam Kupsta. The version you have received is a fully-functional demo of the actual commercial product. I, the author of this program grant you the right to evaluate this product for 30 days, if you like it; please purchase a Commercial Version (the registration form is included with this document).

- 1- You may NOT distribute the Commercial Version of DBL/PC. This is considered PIRACY, and PIRACY is illegal.
- 2- You may NOT modify, decompile or alter DBL/PC in any way.
- 3- You may distribute the Evaluation Copy only, UNMODIFIED.
- 4- If necessary, you may change archive formats. but that is about it! (nothing else!)
- 5- You must register the Evaluation Copy after the evaluation period (30 days).
- 6- If you require a customized version please contact the author for pricing and details.

Copyright Notice:

Dead Bolt Lock/PC is copyrighted by Adam Kupsta. It is not free software.

Source Code:

Sorry the source code is NOT available. I have heard many bad experiences with other companies, or individuals having problems with source codes "floating around", I feel that the

source code is the author's private possession and that no one should have it.

Warranty:

DBL/PC is provided AS IS. In other words there is no warranty what so ever on the Shareware Version. In the Shareware version, I could say that I warrant DBL/PC for taking up disk space, but that is about it. In other words-If it breaks you keep the pieces.

Dead Bolt Lock/PC

Page 2

System Requirements:

- IBM PC/XT/AT 286/AT 386/AT 486 or compatible
- Hard Disk Recommended
- Floppy disk drive (5.25" or 3.50")
- Colour monitor recommended.
- Some knowledge about DOS, and BATCH programming (modifying AUTOEXEC.BAT)

Features:

- * Password stored and encrypted in .EXE (Commercial Version) $% \left(\frac{1}{2}\right) =\frac{1}{2}\left(\frac{1}{2}\right) +\frac{1}{2}\left(\frac{1}$
- * Impossible to hack password
- * Easy installation
- * Changeable passwords
- * Cannot be aborted with CTRL-C or CTRL-BREAK
- * Built-In alarm sounds after 4 wrong attempts
- * Powerful password protection at a truly low price

Warning:

Do not attempt to rename to file to anything else. DBL/PC stores password information in PASSWORD.EXE (Commercial version) and PASSDEMO.EXE (un-registered version). Do not compress the file with PK-LITE, Diet or anything of that sort. These programs modify the password information area in the executable code, thus causing unpredictable errors while in operation.

Installation:

DEAD-BOLT LOCK/PC was designed to be user-friendly, yet so

simple to use that a manual is not required. When you type PASSWORD (or PASSDEMO for un-registered versions) you will be prompted to enter a password. Enter a password of your choice, up to 15 characters - no spaces (extended ASCII codes are not recommended). REMEMBER YOUR PASSWORD, since you cannot use LIST or Norton Utilities to view the file and 'just read' the password. The password is ENCRYPTED within the .EXE code it self, making it impossible to hack.

Place the following line in your AUTOEXEC.BAT:

PASSWORD (for registered versions)
-orPASSDEMO (for un-registered versions)

Dead Bolt Lock/PC

Page 3

Example of an Autoexec.Bat (before DBL/PC was installed):

Echo off
Path=C:\;C:\DOS;C:\WINDOWS;C:\QMODEM;C:\QB45;C:\WPWIN
prompt \$p\$g
mouse
doskey
smartdrv 1024 512
cls

>>END OF EXAMPLE <<

Same Autoexec as above but with DBL/PC installed:

Echo off
C:\PASSWORD.EXE
Path=C:\;C:\DOS;C:\WINDOWS;C:\QMODEM;C:\QB45;C:\WPWIN
prompt \$p\$g
mouse
doskey
smartdrv 1024 512
cls

>>END OF EXAMPLE <<

The line that was inserted was:

After you have placed the following line in your Autoexec.Bat, you must now run DBL/PC and configure it.

and just enter your password. Notice you will not be able to see what you type, instead boxes will substitute your input. After you enter your password, press enter and you will be asked to verify it, simply type in the password again and press enter.

And you're off. Reboot your system and feel safe that no one can enter and look at your valuable data but yourself.

To change the password at any time simply type the following at the DOS prompt. NOTE: You must be in the directory where

Dead Bolt Lock/PC

Page 4

DBL/PC is located!

PASSWORD /RESET (for registered versions)

PASSDEMO /RESET (for un-registered versions)

You will be asked for your OLD password. Once you enter your OLD password, you will be prompted for your NEW password. And Voila! Your password is changed.

Command Line Switches:

DBL/PC offers several command-line switches or parameters:

/HELP /RESET /VER

Description of command-line switches:

/VER

Displays the current version of DBL/PC and the status (Commercial, Shareware, or Beta/x-where the x represents the release number.)

/RESET

Permits you to change the current password. NOTE: You must enter your old password first, then enter your new password.

/HELP

Displays the command-line switches and gives a brief description of them.

Registration:

You are granted a 30-day evaluation period. After that period, if you decide you will use DBL/PC you must register it. Also when you register your copy, you will be automatically in my database, so you can:

Receive notifications of future updates Upgrades to future versions at low prices Fax/Voice Technical Support One free upgrade of your choice

It's so simple even my father can operate it! {Grin} (And he does not like complicated programs-the old fashioned type)
