## Notation and Symbols

In this section, we've illustrated and described the conventions we've used throughout the manual. Our style is designed to eliminate clutter so that you can focus on the important task of protecting your data. Take a look now, before you begin using the guidelines, so that you'll know how to interpret the information in this manual.

### Procedures

Procedures begin with a feature description followed by step-by-step procedures. Specific text you are to type is shown in uppercase letters. Placeholders for items such as file names that you must supply yourself are shown in lowercase letters.

We do not tell you to press ENTER after every command. We assume you have a working knowledge of the DOS environment.

The following paragraphs show how procedures appear:

**Step****Action**

1. Numbered steps tell you what action to take.

**Response:** Tells how the system responds to the actions you take.

**Action:** Tells what further action, if necessary, you need to perform to complete the step.

Once you become familiar with how to use ImageStor, you can skip the feature description and go straight to the procedure for a quick reference.
