

NoteZ v3.23

NoteZ is a variant of the Post-It idea for Windows NT 3.51 or later or Windows 95. It provides the usual pop up notes on the desktop, but also a diary and a calendar for reviewing appointments and reminders. Notes are organised into folders and can be sorted and searched, so they can be used as a simple flat file database.

Info on using NoteZ is provided in the help file. This file is just to describe how to get NoteZ started. NoteZ is available for Windows NT and Windows 95, but it will not run under Windows for Workgroups or earlier.

Installing NoteZ

To install NoteZ simply run setup.exe. You will be asked for the directory where NoteZ should be installed. You can use an existing directory or setup can create a new directory for you. If you already have NoteZ installed the setup program will by default upgrade your existing installation. The setup program is designed to leave your current notes intact, but as always, if you have important data then **back it up first** before you install.

If you're using NT v3.51 then setup will create a group and icon for NoteZ in Program Manager. On NT v3.52 or later or Windows 95 setup will add an entry for NoteZ to the Start menu.

Changes

NoteZ v3.22 was the first version specifically designed for Windows 95. v3.23 is just a minor bug fix and I've finally written a proper install program. If you're already happily using v3.22 There is little to be gained from upgrading to v3.23.

Registration

NoteZ is shareware; the registration fee is ten pounds sterling or 15 US dollars. No-one will hassle for registration, and I won't be losing any sleep worrying whether you've registered or not, but registering will give you a nice warm feeling (and me ten pounds :-)

I cannot take credit cards, but cheques in sterling or US dollars or indeed cash are welcome and should be sent to:

John Rennie.
