

MACROLOC POINTER

The macros in FREE Keyboard and FREEHOME Keyboard often use other macros. In order for one macro to use another, the first macro must know the full name (including path) of the other. MacroLoc is the pointer to the location of the FREE Macro Library where all of the macros are kept. MacroLoc is set (assigned) in a macro, called, appropriately enough, MACROLOC.WPM. If MACROLOC.WPM doesn't assign MacroLoc to the location of the FREE Macro Library, most of the macros will fail.

The Install macro will usually set this macro for you. The ZIP file contains macros with the assignment for default locations on the A, B, C, D, F and H drives. The Install macro will copy the appropriate template over MACROLOC.WPM.

Sometimes, however you are not using one of the default locations:

F:\PROGRAMS\WP51\MACROS\FREE\	A typical Novell system location
H:\MACROS\FREE\	A typical Novell user location
C:\WP51\MACROS\FREE\	The normal stand alone PC location
D:\WP51\MACROS\FREE\	A normal Arcnet location
A:\MACROS\FREE\	To run from a floppy now and then
B:\MACROS\FREE\	To run from a floppy now and then
Null (no location) *	The same location as the Keyboard *

If you have installed the FREE Macro Library at some other location, YOU MUST CHANGE THE ASSIGNMENT in the first line of the macro. Note that the definition must end with a "\".

* This Null location is used by some versions of the FREEHOME Keyboard and isn't recommended for use with the full FREE Keyboard. If you do use the Null location, you must edit the macro FreDocLoc to point to the FREE Macro Library in order to use the BlackLine, Fax or the fax portion of the Paper_ macros. Please read the notes in the FreDocLoc macro for more information.

HOW TO CHANGE THE MACROLOC MACRO:

In WordPerfect, press [Ctrl F10] to edit a macro
Type MacroLoc and [Enter] to edit this macro
Type E to start editing
The top line is the only line to change
You should change only the information between the tildes (~~)
Just replace the path that is there with a new path
For example:
Old: {ASSIGN}MacroLoc~A:\MACROS\FREE\~{RETURN}
Step 1: {ASSIGN}MacroLoc~~{RETURN}
New: {ASSIGN}MacroLoc~C:\WPC\WP51\MACROS\FREE\{RETURN}
