## About Halloween Slots

Halloween is the first in a series of seasonal/holiday slot games to be published by Ultisoft, Inc. Look Christmas Slots and New Year Slots coming in late-1998.

This is a one payline slot machine game. Up to three coins can be bet on each spin. Winnings are based on the symbols on the payline and the number of coins being bet. There are also several bonus features which make Halloween Slots very fun and also adds an element of skill to the game.

The game will detect the number of colors available and will use either True Color (24-bit) graphics or 256 color (8-bit) graphics depending on your graphics card's capabilities. The game will also adjust to your current resolution and will take up the full screen.

Please send comments, suggestions and bug reports to [support@ultisoft.com](mailto:support@ultisoft.com)

# Keyboard Controls

Besides using your mouse to control the game, you can use your keyboard for betting and for spinning or stopping the reels

To Bet one Coin: Press B

To Bet max Coins: Press M

To Spin: Press the Enter Key or the Space Bar

## Placing Bets

Click the "Bet 1" or "Bet 3" buttons to place your bet. You can also press the "B" or "M" buttons to place bets. Click the "Spin" button to spin (or hit the "Enter" key or "Space Bar"). You can continue to bet the same amount by just spinning.

## **Borrowing Credits**

Click on the Borrow button to borrow (or repay) credits. A new game starts with 1000 credits which are considered borrowed.

## Payoffs Chart

Click the PAYOFFS menu item within the program to view the payoff chart. The payoff chart lists the amounts won for various winning paylines and bonuses.

Remember that payline winnings are based on one coin bet. If you bet three coins, the payoffs would be tripled.

# Bonuses

## ***Nudges***

Effective use of nudges is the key to beating this game. You can spend a nudge by clicking the flashing "Nudge" box above and of the three slot reels. You can only nudge a reel if you have collected one or more nudges and if the last spin was a losing spin. You cannot nudge after a winning spin. By nudging, you can turn a losing spin into a winning spin. Try to save your nudges for spins which can easily be nudged into a winning spin for a good payoff. (Hint: always nudge a wild symbol because it will give you back your nudge and will cause a winning payline).

You get nudges every time the wild symbol lands on the payline. You can also win nudges on the "Trick or Treat" screen.

## ***Trick or Treat***

When you get three of the "Trick or Treat" symbols, you go to a special "Trick or Treat" screen. Click on one of the six pumpkins to reveal a prize. You can win credits, nudges, or nothing at all. You can hit the enter key or space bar to randomly select a pumpkin.

## **Loading and Saving Games**

You can save a game at any time by clicking the **SAVE GAME** button. You will be able to name your game anything you like up to 30 characters.

You can then load any of your saved games by clicking the **LOAD GAME** button.

Your current game is saved automatically when you exit the game. When you run the game later, your last game will be loaded automatically.
