

This is a set of four fonts that I have found on the Publishers' Paradise BBS (see .PFB file comments for BBS number) that work with Zenographics SuperPrint. Not all Adobe Type 1 fonts do, there are several variations of Adobe Type 1, especially since developers had to guess for so long about the intricacies of the format.

Ignore that the .AFM files are missing, they install and work okay without them.

ANTQOLB - Looks like "Antique Olive Bold".

ANTQOL - Looks like "Antique Olive".

The preceding two fonts are rounded sans-serif fonts with some tapered ends. (Looks exactly like the examples in the AGFA type catalog.)

COTNWOOD - A woodtype.

This is a woodtype font. Useful in large sizes for posters, etc. There is essentially no lower-case character set. (If your word processor does small caps, such as Ami Professional, that's the way you will have to do it.)

EUROST - Looks like "Eurostile" (HP's "Microstyle").

It is a squared-off sans-serif font. A good description of this font is that it is very "techy-looking".
