

Help file for the Canon BJ-10e Printer Driver (CANON10E.DRV)

Halftoned Graphics

This printer offers an option called halftoning. You'll see this in the "Print Quality" section of the printer setup dialog box--one option will say "Halftoned" after it. Halftoning is a way of creating different levels of gray when printing in black and white. Halftoned graphics generally photocopy better than the normal graphics. Print Quality options not marked "Halftoned" use an alternate method of gray scaling called dithering. You may want to print some graphics with gray shades to get a feel for the difference between these options.

Paper Source:

Select "Auto" for your paper source, regardless of what method you use to feed paper into this printer.
