NeXT Conversion Information

By: Doug Brenner <dbrenner@umaxc.weeg.uiowa.edu>
Date: January 1991
Notes: This font was known as GenoaItalic on the Macintosh.   The AFM and PostScript files seemed
            a bit confused in the areas of FontName, FamilyName and Weight.   I made changes,
            hopefully for the better.

Original Author's Notes

Genoa Read Me
by Alan R. Townsend

Genoa is a Type 1 font set basically similar to the Venice font that came with the Mac OS. It is
designed for use with the Macintosh computer and any Postscript® printer. It is also Adobe Type
Manager (ATM) compatible.

Since Genoa is a display font, it is generally not acceptable for body text. This font includes both Roman and Italic faces.

I make no claims as to the completeness or usefulness of this font, nor is any warranty implied. This font is supplied as is.

This font is supplied as Freeware. I am not asking for any money, but do ask that you include this file if you pass it on to someone else. If you feel compelled to pay for this, send any checks, money orders, Type 1 fonts of your own design, postcards, comments, or whatever to:
