[The supported hardware should be listed, in both specific and general terms. As many general caveats as necessary should be included. However, specific details of the hardware should be left for the NeXTanswer on that specific hardware. See existing driver ReadMe's for examples.]

Supported [Displays][Interfaces][What have you]

[If additional hardware is required, e.g. a display for a graphics card and driver or an ethernet interface for an ethernet card and driver, the requirements and supported models should be listed here.]

Installing the Device Driver

[You should include step by step instructions for installing the device driver. Each should be numbered and indented just like this paragraph is. See the existing ReadMe files in NeXTanswers for examples.]

[The following information should appear regardless.]
