SwitchBox

INHERITS FROM Box : View : Responder : Object

DECLARED IN SwitchBox.h

CLASS DESCRIPTION

A SwitchBox is a View that allows its subview to be switched on request. The subview is switched to one of a set of predefined views. The separate subviews are assigned to the views of other panels, windows or boxes. This allows the interface on a region of a panel to change dynamically as it does in the Preferences application where one panel is used to serve as the working space for several distinct tasks.

INSTANCE VARIABLES

id panel0..panel9

id panelList

id delegate;

id origContentView;

int defaultPanel;

panel0..panel9 Outlets allowing connections to be made in Interface Builder.

panelList An instance of List which actually holds the subviews.

delegate The delegate of the SwitchBox.

origContentView The contentView originally assigned to the Box.

defaultPanel METHOD TYPES The number of the subview SwitchBox initially takes.

Initializing a new SwitchBox object

- initFrame:

Freeing a SwitchBox object - free

Setting The Default Subview - setDefaultPanel:

- defaultPanel

Switching the Subview ± switchTo:

± switchToTagOf:

Setting the Delegate ± delegate

± setDelegate:

INSTANCE METHODS

delegate

- delegate

Returns the delegate of the NXBrowser, the object that provides the data to be browsed.

See also: - **setDelegate:**, ^aMETHODS IMPLEMENTED BY THE DELEGATE^a

free

- free

Releases the storage for the SwitchBox but not all its subviews.

See also: - **free** (View)

initFrame:

- initFrame:(const NXRect *)frameRect

Initializes the SwitchBox, which must be a newly allocated SwitchBox instance. The

SwitchBox's frame rectangle is made equivalent to that pointed to by *frameRect*. The title position is set to NX_NOTITLE,

the border type is NX_BEZEL. The defaultPanel is set to -1. Returns **self**.

See also: - initFrame (View), + alloc (Object), + allocFromZone: (Object)

setDefaultPanel:

- **setDefaultPanel**:(int)aNumber

Set the value of defaultPanel to aNumber. Returns **self**.

defaultPanel

- (int) defaultPanel;

Return the value of defaultPanel.

setDelegate:

- **setDelegate:**anObject

Sets the delegate of the NXBrowser to anObject and returns **self**. If anObject is of a class that implements the **browser:fillMatrix:inColumn**: method (normal or lazy delegates) or the **browser:loadCell:atRow:inColumn** and **browser:getNumRowsInColumn**: methods (very lazy delegate), it is set as the NXBrowser's delegate; otherwise the delegate is set to nil. Returns **self**.

See also: - **delegate**, ^aMETHODS IMPLEMENTED BY THE DELEGATE

switchTo:

- **switchTo:**(int)anIndex

Switches the SwitchBox' subview to the subview in the panelList at anIndex. Returns self.

See also: ^aMETHODS IMPLEMENTED BY THE DELEGATE^a

switchToTagOf:

- **switchToTagOf:**sender

Switches the SwitchBox' subview to the subview in the panelList at [sender tag]. If, however, sender isKindOf Matrix then [[sender selectedCell] tag] is used. Returns **self**.

METHODS IMPLEMENTED BY THE DELEGATE

Output

Description:

METHODS IMPLEMENTED BY THE DELEGATE

willSwitchTo:

- willSwitchTo:(int)anIndex

This method invoked by SwitchBox when it has been asked to switch to subview in panelList at anIndex.

Returns nil if the switch is to be aborted. No attempt is made to reconcile the aborted switch with the original *sender* of a **switchToTagOf:**.

didSwitchTo:

- **didSwitchTo:**(int)anIndex

This method invoked by SwitchBox when it has switched to subview in panelList at anIndex.
