

Jeremy's Volume Pro CSM 1.1.3

What is it?

Volume Pro CSM is a Control Strip Module that lets you adjust the sound volume and left/right balance (if you have stereo speakers attached).

Compatibility

The Volume Pro CSM requires Sound Manager 3.0 and Control Strip 1.4 or better. Both are standard in Mac OS 8 or later.

Installing the Volume Pro CSM

If you are using Mac OS 8.5 or earlier, you must drag the Control Strip Module to the Control Strip folder inside your System folder. If you are using Mac OS 8.6 or later, the Mac OS will recognize the Control Strip - merely drag it to your System Folder, and the Mac OS will move it automatically for you.

With Mac OS 8.5 or earlier:

- 1) Open your System folder.
- 2) Copy the Control Strip Module to the Control Strip Folder in your System folder.
- 3) Restart your computer.

Configuring the Volume Pro CSM

Once you've installed the Volume Pro CSM, you can configure it to match your personal preferences.

Volume popup menu

The popup menu lets you control the appearance of the Control Strip.

Show left/right balance

Displays the left and right balance levels in graphical form.

Show volume level

Shows the volume as a percentage, where 0% is muted and 100% is full volume.

Show balance levels

Shows the left and right balance levels as a percentage, where 0% is muted and 100% is full volume.

Beep after changing volume

If selected, this Control Strip will beep once whenever you change the volume or left/right balance. Turning it off may be desirable if you are using headphones to listen to an audio CD.

Adjusting the volume

To adjust the volume, click down on the volume portion of the CSM. A slider will pop up that you can adjust. Dragging the slider downwards will reduce the volume. Dragging the slider all the way to the bottom will mute the sound.

Adjusting the balance

To adjust the balance, click down on the balance portion of the CSM. A slider will pop up that you can adjust. Dragging the slider downwards will increase the left channel volume; dragging it upwards will increase the right channel volume.

Revision History

1.1.3 - 6 February 2000

- Minor cosmetic changes.

1.1.2 - 20 December 1999

- Enhance module to use Extensions Strip sliders if available.

1.1.1 - 4 November 1998

- Fix saving of 'beep after change' setting.
- Fixed bug where popup wouldn't appear if volume set to 100%.

1.1.0 - 3 September 1998

- Add control of beep after changing volume.

1.0.0 - 14 April 1998

- First release.
