Dear Mr. Reganhardt:

Enclosed is a disk with some Smalltalk/V286 source code. Most of the code was created by me. Some was copied from the Usenet comp.lang.smalltalk or from various magazines. I hope that your project of collecting and distributing Smalltalk source code is successful. I am sorry that we were unable to contribute anymore. Hopefully you have obtained more from others, especially Sam Adams.

Since the application browser doesn't seem to work well for me, I have also included the various classes that make up each application. The notecard application still has some bugs in it. It doesn't pick information off a notecard for editing, moving etc. If you or anyone can fix it, be my guest. It was developed in Sam Adam's class for St80 and I have tried to port it to ST/V286.

Thanks,

Kendall Green
