# Chapter 1

# UnPack

## 1.1 UnPack Master

UnPack Master Version 0.4

© Paul Bray 1998

Contents:

**Introduction** About UnPack Master

**Legal Stuff** Read This Before Using UnPack Master

**Shareware** This Program Is Shareware

**Requirements** What UnPack Master Needs

**Usage** How To Use UnPack Master

**Bugs!** Bugs?

**Future** The Future!!

## 1.2 About UnPack Master

UnPack Master Is To Make Unpacking Files Much Easier, So You Don't Need To Know How The Commands Go.

UnPack Master Was Created By Paul Bray

UnPack Master Uses The EasyGUI Module That's Why UnPack Master File Size Is So Large.

UnPack Master Was Created On An A1200 With Workbench 3.1, 170MB HD And 10MB Of Ram (2MB Of Chip, 8MB Of Fast).

## 1.3 Legal Stuff

UnPack Master Is Provided "AS-IS". There Is No Type Of Warranty If You Are Using UnPack Master.

Use At Your Own RISK!

You Can Contact Me At My [Address](#)

---

## 1.4 Shareware

UPM Is Shareware, Some Things Are Disabled In The Shareware Version.

If You Wish To Have The Full Version Send \$5, Your Name And Address, A 3.5" Disk And Write The Program Name And Version Number To Be Registered And Send It To **Me**.

You May Think That's A Lot But You Not Just Pay For The Disabled Parts, Your Pay For The The Whole Program.

\* Warning!: If You Send Money By Mail I Will Not Take Responsibility If The Money Is Lost.

## 1.5 What UnPack Master Requires

\* Needs Workbench 2.04 or Higher

\* Needs Asl.library Version 37 or Higher

Optional:

\* LZX (Not Available In The Shareware Version)

\* UNLZX

\* LHA (Not Available In The Shareware Version)

Note: If You Are Missing One Or More Of These You Can Not Use Them In UnPack Master.

## 1.6 Using it

It Can Be Started From WB or CLI.

All You Need To Do Is Select The Source Then The Destination.

Select Which Type Of UnPacker Then Press Go!

\* Note: If You Start It From The Cli Then You Can Get The Messages From The UnPackers.

## 1.7 Bugs!?

If You Find Any Bugs Could You Send The Details Of That Bug To **Me**.

There Is One Bug I Found, I Forgot To Set 'req' And 'reqII' To NIL So The Program Thinks They Point To The Allocated FileRequesters, If The Program Fails Before The Allocating Of The FileRequesters It Will Try To Close Them And Will Most Likely Crash Since They Point To A Random Memory Location.

This Bug Has Been Fixed In Version 1.7

## 1.8 The FUTURE

The Next Version Of UnPack Master Features:

\* Support For DMS

\* Reqtools.library

\* Two File Requesters

\* EasyRequestArgs Instead Of WriteF() For Error Messages

If You Have Any Other Ideas For The Next Version Of UnPack Master Then Could You Please Send Them To **Me**.
