

Flipper
July 28, 1990
Barry Press

Flipper is a small application I wrote because I was tired of waiting around for one or another application to load the printer driver so I could change from portrait to landscape and vice versa.

Flipper runs only as an icon, and displays the current orientation of the default printer. When double-clicked, it will change the printers orientation, updating the icon in the process. Flipper notices when you change the printer orientation via the setup dialog box directly, and I think I got it right so it notices changing the default printer (but I'm less sure of that).

I had wanted a dolphin for the icon (of course), but had no handy clip art and I'm no artist. So, the icons for portrait and landscape aren't exactly ready for the Museum of Modern Art.

Flipper is Copyright 1990, Barry Press. It may be distributed freely as long as it is without charge and without modification to the program.
