

Lotus Ami Pro 3.0

We at Mercury Sports have selected a new word processor — Ami Pro. An evaluation group has been studying the alternatives for the last few months and has unanimously chosen Ami Pro for its power and extreme ease of use. Ami Pro offers an excellent tutorial for learning the basics. And the on-line help feature is so detailed, you will never be left in the dark.

Most word processors force you to think in words alone, while most people think in pictures, symbols, and colors too. Finally there's a word processor that works and thinks the same way you do — visually.

Revision Marking

Show all edits

What is revision marking? Revision marking is a way of seeing what changes have been made to a document. For instance let's say you give me a document and want to know what changes I would make. I would simply turn on Revision marking and make my changes. Anything I add would appear in a different color and attribute as will anything I delete.

Review Revisions

When I give you the document back you can then review my revisions. Ami Pro will go to the first revision and ask you if you want to accept or cancel my revision suggestion. That's all there is to it. The color and attributes that appear on the screen are completely user customizable.

Notes

Color-Coded Notes

Wouldn't it be nice to be able to scan a document and immediately see if there are any notes from your manager, or chief editor? With Ami Pro's color notes you can. In fact everyone in your office or on your network can have their own color note.

Print Notes and Authors

Notes can display in color or by the author's initials. Ami Pro can also print the notes as annotations at the end of the document with page number references to each note in the document. The best way to elicit information from a number of people and quickly summarize those comments.

Presentations

Automatic Presentations with Freelance

Anyone who creates presentations on a regular basis has had to put together a presentation at the last minute or even worse had to ask someone who had never created a presentation before to try. With Ami Pro and Freelance, there is no work involved. Actually there is — copy and paste. That's all there is to it.

Just copy an outline from Ami Pro and paste it into Freelance and Freelance automatically creates a presentation. You can then choose from one of Freelance's 60 or so presentation styles and your entire presentation is complete.

Transition Help from WordPerfect

WordPerfect SwitchKit

With the SwitchKit installed, your keystroke knowledge of WordPerfect works for you as you learn Ami Pro. Just type in the WordPerfect keystrokes for the function you want, and the SwitchKit will demonstrate the function you want in Ami Pro.

Batch File Conversion

A second part of the SwitchKit is the batch conversion utility. Tell Ami Pro what directory of documents or specify particular documents you want converted, and Ami Pro will translate them to Ami Pro format all at once.

Laptop Installation

Now you can install Ami Pro especially for laptops. This installation of Ami Pro reduces the hard disk requirements of the product to under 4MB. The higher-end functionality is not installed, but you will find all the basic word processing features you need to get your documents completed.

Programmability

The Ami Pro Macro Language

A macro language within a word processor? You mean just record and playback, right? Wrong! Ami Pro certainly has record and playback, but its macro language is far richer. With it, you can customize Ami Pro by adding menus or menu items. Even create dialog boxes with Ami Pro's dialog box editor. All in a BASIC-like language.

The Macro Developer's Kit

A great language is one thing, but you need great technical support to put it to work for you. To that end, get the Ami Pro Macro Developer's Kit (MDK). The MDK contains a Dialog editor and full printed documentation of the language.
