Chapter 1

Default

1.1 Problems with macros for FW/FC

I have only tested the macros under FW 3.00 und FW 5.05 (german version). Thats why, i need the problems of non-german user to solve the problems with english version of FinalWriter.

Update 96/09/09

Error: »Extraneous Character«
Heiko Schröder (96/09/04)

Error: »Error 42 Severity 10«
Alex Colic (96/09/06)

1.2 Problem of Heiko Schröder

If i use the FontLook(-Auto)-macros, the RextxMast stops and i get the message "Error .. in line ...: Extraneous characters" in RextxOutput.

The macros were tested in a german version of FW.
As a decimal point the german people use ».« (point). And I believe english people use the »,« (comma).
And with »,« in german FW, i got problems with my RextxMast.

There are two possibilities:
Load Finalwriter, load »Project-Preferences« and change the Decimal to ».«.
Dont forget to save. So the macros will work correctly.

Or

You load the ».long«-macros in an editor, change the ».« of the FW-commands

- LinePrefs
- DrawLine
- PageSetup
- SectionSetup
- SetTab

and save it without ».long« extension to your FWMacros-Drawer.

If the macros work correctly, i hope you would send it to me.

e-mail: s93324@fh-telekom-leipzig.de

Thanks.

1.3 Problem of Alex Colic

Hi, I donwloaded your FW fonts. I am having problems with the FontLook and FontLook-Auto macros. When I start them I get an error 42 severity 10 requester. I have installed them as your docs state. Can you suggest what the problem may be?

Sorry Alex,
in the code of the FontLook(-Auto) 2.20 macros is mistakenly an error.

Im apologized for this awful mistake. Version 2.50 works correctly.

Thanks.
