Chapter 1

SkyHopper

1.1   SkyHopper LightWave Object

```
Incom T-16 SkyHopper from Star Wars
===================================

Seeing the Special Edition is upon us, I''ve made a LightWave model of the T-16  ←
    SkyHopper from Star
Wars.
Its the model that Luke toys with in the early part of the movie, and you  ←
    supposedly see them at the
end of Return of the Jedi Special Edition version.  Its an unusual model, and  ←
    unlike my Runabout
model
it weighs in at under 2000 polygons with only a few image maps.
It took me a few hours to model using reference photos and the Star Wars Technical ←
     Journal.
Use it as you wish, but please just credit me with the modelling of it if you use  ←
    it for anything.

Contains:
SkyHopper.lwo
Wing.Map
ReadMe!

Also Uses:
DreadHull.iff
Fractual Reflections.iff
