Use PC Joysticks With Your Amiga

By Craig

This file tells you how you can build an interface so that you can use any PC analogue joystick on the Amiga.

You will need:

- A Soldering Iron
- 15-way female D-type connector
- Nine-way female D-type connector
- Covers for the above
- A short piece of five core cable

Instructions:

All you need to do is solder the cable from one connector to the other, as per this list. Note that "-" means no connection is needed.

15 WAY CONNECTOR	9 WAY CONNECTOR
1	-
2	3
3	9
4	-
5	8
6	5
7	-
8	7
9	-
10	-
11	-
12	-
13	-
14	-
15	-

I think this interface is the best option, rather than replacing the lead on a PC joystick with an Amiga one, because you have it for all the

joysticks you might buy.
