Chapter 1

TrackDisplay

1.1   Track Display (For Diskdrive)

```
Track Display

I have no information for this circuit. However, it's quite obvious what it
does - it connects to your external disk drive and displays on a nice
backlit display what tracks your diskdrive are reading/writing. It would
look pretty cool built into a tower (a 5/14" drive bay maybe?), or you
could mount it in it's own external box.

Please refer to the circuit schematic for a list of parts you'll need to
build it.
