1.2 Legal Stuff

This program may be distributed freely by PD. libraries, Bulletin Boards
and may be included in coverdisk/CD-ROM compilations as long as the files
remain unaltered.

No guarantee is made as to the reliability or effectiveness of this
software; use at your own risk. The author is not responsible for any
loss or damage caused in any way by the use of this software.

1.3 Introduction

A Trivia Quiz game with a question pack generation tool so you can
write your own questions.

1.4 Requirements

This program has undergone testing on a standard A1200 and also an A1200
with an 030/50 mhz accelerator and 16 meg FastRAM.

1.5   Installation

To install this fine proggy to your system just copy the directory to
the location of your choice. No assigns are necessary.

To install new question packs, just put them in the /data drawer.

1.6   How do I use this fine proggy?

The game is a simple, multiple choice trivia game.
When you click on the main program icon you are presented with a file
requester just select the question pack that you wish to play and click
on OK.
  Just click on the flashing START button to begin. The LOAD button lets
you load another question pack and the QUIT button brings up a requester
allowing you to quit the game completely.
  Once started just click on the A, B, or C buttons depending on which
answer you believe to be correct. You will be told whether you are right
or not and the START button will begin flashing ready for the next
question.
If the question pack contains less than 50 questions then you will be
asked all the questions in the pack, otherwise you will be asked 50 random
questions.

You can quit to Workbench at any time and the game does not disable
multitasking.

1.7   Quiz Generation

Included with The Ulitmate Trivia Quiz is a small program to allow you to
create your own question packs
It should be pretty easy to use but here are a few pointers.

The question packs are created in a database with two fields for the
question, one each for the three possible answers and a field to signify
which of the three answers is correct. Also in the window is a box to tell
you how many questions are in the currently loaded pack.

Underneath these fields are a number of buttons. These are:

Add   - To add a new question to the current pack
Edit - Edit the current question
Prev - Goto the previous question
Next - Goto the next question
First - Goto the first question in the pack
Last - Goto the last question in the pack

```
Load  - Load an existing question pack
Save  - Save the current question pack
```

The maximum amount of questions any pack can contain is 250 but a pack
can contain as little as one question and will still load and run in
The Ultimate Trivia Quiz.

Two question packs are provided. Both will load into the quiz, but only
the Red Dwarf pack will load into the question pack generator. This file
should give you some idea of the format of the questions.

If you do create a question pack then upload it to Aminet (game/data)
and other people can enjoy the fruits of your labours.

1.8   Contacts

The Ultimate Trivia Quiz was written on an A1200T with an Apollo 1230
and 16 meg of Fast RAM in Blitz Basic 2 by Tim Quigley Of MadSoft Inc.

MadSoft Inc. can be contacted by snail-mail at:
