Chapter 1

4IDE_Device

1.1 4 Way IDE Splitter for your A1200/A4000

Short: Connect 4 IDE drivers to your A1200/4000
Author: xs@xnet.it
Uploader: xs@xnet.it
Type: hard/hack
Replaces: 4IDE.lha

Here's to you my little package: 2 pictures to let you build a little and cheap (not buffered) interface which lets you connect up to 4 IDE peripherals (Hd's and CDRoms 2 per IDE line). The pictures describe THE SAME interface with different "views".

You can download IDEFIX to let the SO read the added peripherals. I have still 2 Drivers (Hd's) , so don't write me and ask how to configure a complex system, I can tell you that it works fine with the principal IDE line...

- don't use too long flat cables
- I suggest you to buy 2 IDE 40 pins male crimping connectors

REMEMBER: the best thing to do is to let somebody else (a technician) do such a work, and a buffered cable is strongly recommended, but my interface is cheap and easy to build up.. anyway remember that it may not work with some particular Hardware or Software configuration (I don't know which... I have an A1200 with Blizzard IV 030 50MHz 16M Ram)... see ya!

I am not responsible for any damage this interface may cause to your computer.

Click on the two buttons below to view the circuit schematics on how to build:
