## Null

### 1.1 Null Modem Cable

#### Null Modem Cable Construction

By Craig

#### Purpose:

There's quite a few game's which allow you to link up two Amiga's using a Null-Modem for a head-to-head game, some of these games include Lotus 2, Stuntcar Racer and Battlecars II. You can buy a Null-Modem cable from most computer shops, for £15 quid but they are'nt that long, as I required one that was 3 metres long so that I could make it stretch to my brothers room.

#### You Will Need

A Soldering Iron

Solder

2x 25-pin female D connectors

25 way cable

2x 25 way D hoods

#### Construction

Follow the table below. You should'ent have any problem assembling this as it's very straight forward and even a novice can build it. Once complete you can put on the D hoods on both connectors to make it look more professional.

Connector 1 pin #	Connector 2 pin #
2-----	3
3-----	2
7-----	7

End.
