1.1 Parnet Help

PARNET HELP

Written, digitized, and edited by K.Symonds.

Using a parnet cable and parnet software, it is possible to network up two Amiga's. This project explains how to build a PARNET cable to do this.

This disk is in addition to the official PARNET software. It contains pictures to help the user construct the cable. On this disk are two sets of pictures: AGA and non-AGA. The AGA pics are of higher quality, and contain more information compaired to the non-AGA.

Click Below to view diagrams on how to construct the Parnet Cable:

Cable.pic256.iff
Cable.pic32.iff
Parts.pic256.iff
Parts.pic32.iff
PlugToPlug.iff

Prices and parts are from the Maplins catalogue and are correct as at September 1993. Maplins address and telephone number are given below.

All pictures digitized using the good old DigiView Gold, saved out as 24bit files, converted and edited in Deluxe Paint 4 (AGA). A slow method, but the 24bit quality is the best until Rombo bring out Vidi 24 real time. Come on ROMBO!

Last minite added extra is a DMS file of a disk I created some time ago to put in my CDTV disk drive. If left in the drive whilst booting/turning on the CDTV, it will automatically set up all the ParNet requirements for its end (making itself unit 1) and displays a picture just incase you forget what is going on with your CDTV. The DMS file is only offered to WB2+ users as there was no room on the disk for the extra files for WB1.3. Please use your own DMS to unpack the file.
