1.1 Internet RFCs

Internet RFCs

This directory contains all available Internet RFCs up to number 2231. Later RFCs will be included on subsequent CU Amiga CDs, with an updated index.

Search

This file contains citations for all RFCs in reverse numeric order. RFC citations appear in this format:

```
NUM STD   Author 1, ... Author 5., "Title of RFC", Issue date.  
          (Pages=##) (Format=.txt or .ps) (FYI ##) (STD ##) (RTR ##)  
          (Obsoletes RFC####) (Updates RFC####)
```

Key to citations:

is the RFC number; ## p. is the total number of pages.

The format and byte information follows the page information in parenthesis. The format, either ASCII text (TXT) or PostScript (PS) or both, is noted, followed by an equals sign and the number of bytes for

that version (Post- Script is a registered trademark of Adobe Systems Incorporated). The example (Format: PS=xxx TXT=zzz bytes) shows that the PostScript version of the RFC is xxx bytes and the ASCII text version is zzz bytes.

The (Also FYI ##) phrase gives the equivalent FYI number if the RFC was also issued as an FYI document.

"Obsoletes xxx" refers to other RFCs that this one replaces; "Obsoleted by xxx" refers to RFCs that have replaced this one. "Updates xxx" refers to other RFCs that this one merely updates (but does not replace); "Updated by xxx" refers to RFCs that have been updated by this one (but not replaced). Only immediately succeeding and/or preceding RFCs are indicated, not the entire history of each related earlier or later RFC in a related series.

For example:

1129 D. Mills, "Internet time synchronization: The Network Time Protocol", 10/01/1989. (Pages=29) (Format=.ps)

Many RFCs are available online; if not, this is indicated by (Not online).

Online copies are available via FTP from the InterNIC Directory and Database Services server, ds.internic.net, as rfc/rfc####.txt or rfc/rfc####.ps (#### is the RFC number without leading zeroes).

RFCs may be requested through electronic mail from the InterNIC Directory and Database Services automated mail server by sending a message to mailserv@ds.internic.net. In the body of the message, include the following command:

```
document-by-name rfcNNNN
```

where NNNN is the number of the RFC. For PostScript RFCs, specify the extension, e.g. "document-by-name rfcNNNN.ps". Multiple requests can be sent in a single message by specifying each document in a comma-separated list (e.g. "document-by-name rfcNNNN, rfcYYYY"), or by including multiple "document-by-name" commands on separate lines.

The RFC Index can be requested by typing "document-by-name rfc-index".

2325 Definitions of Managed Objects for Drip-Type Heated Beverage Hardware Devices using SMIV2. M. Slavitch. March 1998. (Format: TXT=12726 bytes) (Status: INFORMATIONAL)

2324 Hyper Text Coffee Pot Control Protocol (HTCPCP/1.0). L. Masinter. March 1998. (Format: TXT=19610 bytes) (Status: INFORMATIONAL)

2323 IETF Identification and Security Guidelines. A. Ramos. March 1998. (Format: TXT=9257 bytes) (Status: INFORMATIONAL)

2322 Management of IP numbers by peg-dhcp. K. van den Hout, A. Koopal, R. van Mook. March 1998. (Format: TXT=12665 bytes) (Status: INFORMATIONAL)

- 2321 RITA -- The Reliable Internetwork Troubleshooting Agent. A. Bressen. March 1998. (Format: TXT=12302 bytes) (Status: INFORMATIONAL)
- 2320 . . March 1998. (Not online)
- 2319 . . . (Not online)
- 2318 The text/css Media Type. H. Lie, B. Bos, C. Lilley. March 1998. (Format: TXT=7819 bytes) (Status: INFORMATIONAL)
- 2317 Classless IN-ADDR.ARPA delegation. H. Eidnes, G. de Groot, P. Vixie. March 1998. (Not online) (Also BCP0020) (Status: Best Current Practice)
- 2316 . . March 1998. (Not online) (Status: PROPOSED STANDARD)
- 2315 PKCS #7: Cryptographic Message Syntax Version 1.5. B. Kaliski. March 1998. (Format: TXT=69679 bytes) (Status: INFORMATIONAL)
- 2314 PKCS #10: Certification Request Syntax Version 1.5. B. Kaliski. March 1998. (Format: TXT=15814 bytes) (Status: INFORMATIONAL)
- 2313 PKCS #1: RSA Encryption Version 1.5. B. Kaliski. March 1998. (Format: TXT=37777 bytes) (Status: INFORMATIONAL)
- 2312 S/MIME Version 2 Certificate Handling:. S. Dusse, P. Hoffman, B. Ramsdell, J. Weinstein. March 1998. (Format: TXT=39829 bytes) (Status: INFORMATIONAL)
- 2311 S/MIME Version 2 Message Specification. S. Dusse, P. Hoffman, B. Ramsdell, L. Lundblade, L. Repka. March 1998. (Format: TXT=70901 bytes) (Status: INFORMATIONAL)
- 2308 Negative Caching of DNS Queries (DNS NCACHE). M. Andrews. March 1998. (Format: TXT=41428 bytes) (Updates RFC1034, RFC1035) (Status: PROPOSED STANDARD)
- 2307 An Approach for Using LDAP as a Network Information Service. L. Howard. March 1998. (Format: TXT=41396 bytes) (Status: EXPERIMENTAL)
- 2306 Tag Image File Format (TIFF) - F Profile for Facsimile. G. Parsons, J. Rafferty. March 1998. (Format: TXT=59358 bytes) (Status: INFORMATIONAL)
- 2305 A Simple Mode of Facsimile Using Internet Mail. K. Toyoda, H. Ohno, J. Murai, D. Wing. March 1998. (Format: TXT=24624 bytes) (Status: PROPOSED STANDARD)
- 2304 Minimal FAX address format in Internet Mail. C. Allocchio. March 1998. (Format: TXT=13236 bytes) (Status: PROPOSED STANDARD)
- 2303 Minimal PSTN address format in Internet Mail. C. Allocchio. March 1998. (Format: TXT=14625 bytes) (Status: PROPOSED STANDARD)
- 2302 Tag Image File Format (TIFF) - image/tiff MIME Sub-type
-

- Registration. G. Parsons, J. Rafferty, S. Zilles. March 1998.
(Format: TXT=14375 bytes) (Status: PROPOSED STANDARD)
- 2301 File Format for Internet Fax. L. McIntyre, S. Zilles, R. Buckley,
D. Venable, G. Parsons, J. Rafferty. March 1998. (Format: TXT=200525
bytes) (Status: PROPOSED STANDARD)
- 2298 An Extensible Message Format for Message Disposition
Notifications. R. Fajman. March 1998. (Format: TXT=62059 bytes)
(Status: PROPOSED STANDARD)
- 2297 Ipsilon's General Switch Management Protocol Specification
Version 2.0. P. Newman, W. Edwards, R. Hinden, E. Hoffman, F. Ching
Liaw, T. Lyon, G. Minshall. March 1998. (Format: TXT=280484 bytes)
(Updates RFC1987) (Status: INFORMATIONAL)
- 2296 HTTP Remote Variant Selection Algorithm -- RVSA/1.0. K. Holtman,
A. Mutz. March 1998. (Format: TXT=26932 bytes) (Status: EXPERIMENTAL)
- 2295 Transparent Content Negotiation in HTTP. K. Holtman, A. Mutz.
March 1998. (Format: TXT=125130 bytes) (Status: EXPERIMENTAL)
- 2294 Representing the O/R Address hierarchy in the X.500 Directory
Information Tree. S. Kille. March 1998. (Format: TXT=22059 bytes)
(Obsoletes RFC1836) (Status: PROPOSED STANDARD)
- 2293 Representing Tables and Subtrees in the X.500 Direc. S. Kille.
March 1998. (Format: TXT=12539 bytes) (Obsoletes RFC1837) (Status:
PROPOSED STANDARD)
- 2292 Advanced Sockets API for IPv6. W. Stevens, M. Thomas. February
1998. (Format: TXT=152077 bytes) (Status: INFORMATIONAL)
- 2291 Requirements for a Distributed Authoring and Versioning Protocol
for the World Wide We. J. Slein, F. Vitali, E. Whitehead, D. Durand.
February 1998. (Format: TXT=44036 bytes) (Status: INFORMATIONAL)
- 2290 Mobile-IPv4 Configuration Option for PPP IPCP. J. Solomon, S.
Glass. February 1998. (Format: TXT=39421 bytes) (Updates RFC2002)
(Status: PROPOSED STANDARD)
- 2289 A One-Time Password System. N. Haller, C. Metz, P. Nesser, M.
Straw. February 1998. (Format: TXT=56495 bytes) (Obsoletes RFC1938)
(Status: DRAFT STANDARD)
- 2288 Using Existing Bibliographic Identifiers as Uniform Resource
Names. C. Lynch, C. Preston, R. Daniel. February 1998. (Format:
TXT=21628 bytes) (Status: INFORMATIONAL)
- 2287 Definitions of System-Level Managed Objects for Applications. C.
Krupczak, J. Saperia. February 1998. (Format: TXT=98210 bytes)
(Status: PROPOSED STANDARD)
- 2286 Test Cases for HMAC-RIPEMD160 and HMAC-RIPEMD128. J. Kapp.
February 1998. (Format: TXT=11849 bytes) (Status: INFORMATIONAL)
- 2285 Benchmarking Terminology for LAN Switching Devices. R.
-

- Mandeville. February 1998. (Format: TXT=43130 bytes) (Status: INFORMATIONAL)
- 2283 Multiprotocol Extensions for BGP-4. T. Bates, R. Chandra, D. Katz, Y. Rekhter. February 1998. (Format: TXT=18946 bytes) (Status: PROPOSED STANDARD)
- 2282 IAB and IESG Selection, Confirmation, and Recall Process: Operation of the Nominating and Recall Committees. J. Galvin. February 1998. (Format: TXT=29852 bytes) (Obsoletes RFC2027) (Also BCP0010) (Status: BEST CURRENT PRACTICE)
- 2280 Routing Policy Specification Language (RPSL). C. Alaettinoglu, T. Bates, E. Gerich, D. Karrenberg, D. Meyer, M. Terpstra, C. Villamizar. January 1998. (Format: TXT=114985 bytes) (Status: PROPOSED STANDARD)
- 2279 UTF-8, a transformation format of ISO 10646. F. Yergeau. January 1998. (Format: TXT=21634 bytes) (Obsoletes RFC2044) (Status: PROPOSED STANDARD)
- 2278 IANA Charset Registration Procedures. N. Freed, J. Postel. January 1998. (Format: TXT=18881 bytes) (Also BCP0019) (Status: Best Current Practice)
- 2277 IETF Policy on Character Sets and Languages. H. Alvestrand. January 1998. (Format: TXT=16622 bytes) (Also BCP0018) (Status: Best Current Practice)
- 2276 Architectural Principles of Uniform Resource Name Resolution. K. Sollins. January 1998. (Format: TXT=64811 bytes) (Status: INFORMATIONAL)
- 2275 View-based Access Control Model (VACM) for the Simple Network Management Protocol (SNMP). B. Wijnen, R. Presuhn, K. McCloghrie. January 1998. (Format: TXT=77998 bytes) (Obsoletes RFC2265) (Status: PROPOSED STANDARD)
- 2274 User-based Security Model (USM) for version 3 of the Simple Network Management Protocol (SNMPv3). U. Blumenthal, B. Wijnen. January 1998. (Format: TXT=168950 bytes) (Obsoletes RFC2264) (Status: PROPOSED STANDARD)
- 2273 SNMPv3 Applications. D. Levi, P. Meyer, B. Stewart. January 1998. (Format: TXT=143754 bytes) (Obsoletes RFC2263) (Status: PROPOSED STANDARD)
- 2272 Message Processing and Dispatching for the Simple Network Management Protocol (SNMP). J. Case, D. Harrington, R. Presuhn, B. Wijnen. January 1998. (Format: TXT=88445 bytes) (Obsoletes RFC2262) (Status: PROPOSED STANDARD)
- 2271 An Architecture for Describing SNMP Management Frameworks. D. Harrington, R. Presuhn, B. Wijnen. January 1998. (Format: TXT=128227 bytes) (Obsoletes RFC2261) (Status: PROPOSED STANDARD)
- 2270 Using a Dedicated AS for Sites Homed to a Single Provider. J.
-

- Stewart, T. Bates, R. Chandra, E. Chen. January 1998. (Format: TXT=12063 bytes) (Status: INFORMATIONAL)
- 2269 Using the MARS Model in non-ATM NBMA Networks. G. Armitage. January 1998. (Format: TXT=12094 bytes) (Status: INFORMATIONAL)
- 2268 . . January 1998. (Not online) (Status: PROPOSED STANDARD)
- 2267 Network Ingress Filtering: Defeating Denial of Service Attacks which employ IP Source Address Spoofing. P. Ferguson, D. Senie. January 1998. (Format: TXT=21032 bytes) (Status: INFORMATIONAL)
- 2266 Definitions of Managed Objects for IEEE 802.12 Repeater Devices. J. Flick. January 1998. (Format: TXT=134027 bytes) (Status: PROPOSED STANDARD)
- 2265 View-based Access Control Model (VACM) for the Simple Network Management Protocol (SNMP). B. Wijnen, R. Presuhn, K. McCloghrie. January 1998. (Format: TXT=77807 bytes) (Obsoleted by RFC2275) (Status: PROPOSED STANDARD)
- 2264 User-based Security Model (USM) for version 3 of the Simple Network Management Protocol (SNMPv3). U. Blumenthal, B. Wijnen. January 1998. (Format: TXT=168759 bytes) (Obsoleted by RFC2274) (Status: PROPOSED STANDARD)
- 2263 SNMPv3 Applications. D. Levi, P. Meyer, B. Stewart. January 1998. (Format: TXT=143493 bytes) (Obsoleted by RFC2273) (Status: PROPOSED STANDARD)
- 2262 Message Processing and Dispatching for the Simple Network Management Protocol (SNMP). J. Case, D. Harrington, R. Presuhn, B. Wijnen. January 1998. (Format: TXT=88254 bytes) (Obsoleted by RFC2272) (Status: PROPOSED STANDARD)
- 2261 An Architecture for Describing SNMP Management Frameworks. D. Harrington, R. Presuhn, B. Wijnen. January 1998. (Format: TXT=128036 bytes) (Obsoletes RFC2271) (Status: PROPOSED STANDARD)
- 2260 Scalable Support for Multi-homed Multi-provider Connectivity. T. Bates, Y. Rekhter. January 1998. (Format: TXT=28085 bytes) (Status: INFORMATIONAL)
- 2259 Simple Nomenclator Query Protocol (SNQP). J. Elliott, J. Ordille. January 1998. (Format: TXT=58508 bytes) (Status: INFORMATIONAL)
- 2258 Internet Nomenclator Project. J. Ordille. January 1998. (Format: TXT=34871 bytes) (Status: INFORMATIONAL)
- 2257 Agent Extensibility (AgentX) Protocol Version 1. M. Daniele, B. Wijnen, D. Francisco. January 1998. (Format: TXT=177452 bytes) (Status: PROPOSED STANDARD)
- 2256 A Summary of the X.500(96) User Schema for use with LDAPv3. M. Wahl. December 1997. (Format: TXT=32377 bytes) (Status: PROPOSED STANDARD)
-

- 2255 The LDAP URL Format. T. Howes, M. Smith. December 1997. (Format: TXT=20685 bytes) (Status: PROPOSED STANDARD)
- 2254 The String Representation of LDAP Search Filters. T. Howes. December 1997. (Format: TXT=13511 bytes) (Status: PROPOSED STANDARD)
- 2253 Lightweight Directory Access Protocol (v3): UTF-8 String Representation of Distinguished Names. M. Wahl, S. Kille, T. Howes. December 1997. (Format: TXT=18226 bytes) (Status: PROPOSED STANDARD)
- 2252 Lightweight Directory Access Protocol (v3): Attribute Syntax Definitions. M. Wahl, A. Coulbeck, T. Howes, S. Kille. December 1997. (Format: TXT=60204 bytes) (Status: PROPOSED STANDARD)
- 2251 Lightweight Directory Access Protocol (v3). M. Wahl, T. Howes, S. Kille. December 1997. (Format: TXT=114488 bytes) (Status: PROPOSED STANDARD)
- 2250 RTP Payload Format for MPEG1/MPEG2 Video. N. Freed, S. Kille. January 1998. (Format: TXT=34293 bytes) (Obsoletes RFC2038) (Status: PROPOSED STANDARD)
- 2249 Mail Monitoring MIB. N. Freed, S. Kille. January 1998. (Format: TXT=52334 bytes) (Obsoletes RFC1566) (Status: PROPOSED STANDARD)
- 2248 Network Services Monitoring MIB. N. Freed, S. Kille. January 1998. (Format: TXT=34107 bytes) (Obsoletes RFC1565) (Status: PROPOSED STANDARD)
- 2247 Using Domains in LDAP/X.500 Distinguished Names. S. Kille, M. Wahl, A. Grimstad, R. Huber, S. Sataluri. January 1998. (Format: TXT=12411 bytes) (Status: PROPOSED STANDARD)
- 2245 Anonymous SASL Mechanism. C. Newman. November 1997. (Format: TXT=9974 bytes) (Status: PROPOSED STANDARD)
- 2244 ACAP -- Application Configuration Access Protocol. C. Newman, J. G. Myers. November 1997. (Format: TXT=154610 bytes) (Status: PROPOSED STANDARD)
- 2243 OTP Extended Responses. C. Metz. November 1997. (Format: TXT=19730 bytes) (Status: PROPOSED STANDARD)
- 2242 NetWare/IP Domain Name and Information. R. Droms, K. Fong. November 1997. (Format: TXT=10653 bytes) (Status: PROPOSED STANDARD)
- 2241 DHCP Options for Novell Directory Services. D. Provan. November 1997. (Format: TXT=8419 bytes) (Status: PROPOSED STANDARD)
- 2240 A Legal Basis for Domain Name Allocation. O. Vaughan. November 1997. (Format: TXT=13602 bytes) (Status: INFORMATIONAL)
- 2239 Definitions of Managed Objects for IEEE 802.3 Medium Attachment Units (MAUs) using SMIv2. K. de Graaf, D. Romascanu, D. McMaster, K. McCloghrie, S. Roberts. November 1997. (Format: TXT=80651 bytes) (Status: PROPOSED STANDARD)
-

- 2238 Definitions of Managed Objects for HPR using SMIV2. B. Clouston, B. Moore. November 1997. (Format: TXT=65498 bytes) (Status: PROPOSED STANDARD)
- 2237 Japanese Character Encoding for Internet Messages. K. Tamaru. November 1997. (Format: TXT=11628 bytes) (Status: INFORMATIONAL)
- 2236 Internet Group Management Protocol, Version 2. W. Fenner. November 1997. (Format: TXT=51048 bytes) (Updates RFC1112) (Status: PROPOSED STANDARD)
- 2235 Hobbes' Internet Timeline. R. Zakon. November 1997. (Format: TXT=43060 bytes) (Also FYI0032) (Status: INFORMATIONAL)
- 2234 Augmented BNF for Syntax Specifications: ABNF. D. Crocker, Ed., P. Overell. November 1997. (Format: TXT=24265 bytes) (Status: PROPOSED STANDARD)
- 2233 The Interfaces Group MIB using SMIV2. K. McCloghrie, F. Kastenholz. November 1997. (Format: TXT=148033 bytes) (Obsoletes RFC1573) (Status: PROPOSED STANDARD)
- 2232 Definitions of Managed Objects for DLUR using SMIV2. B. Clouston, B. Moore. November 1997. (Format: TXT=37955 bytes) (Status: PROPOSED STANDARD)
- 2231 MIME Parameter Value and Encoded Word Extensions: Character Sets, Languages, and Continuations. N. Freed, K. Moore. November 1997. (Format: TXT=19280 bytes) (Obsoletes RFC2184) (Updates RFC2045, RFC2047 RFC2183) (Status: PROPOSED STANDARD)
- 2230 Key Exchange Delegation Record for the DNS. R. Atkinson. October 1997. (Format: TXT=25563 bytes) (Status: INFORMATIONAL)
- 2229 A Dictionary Server Protocol. R. Faith, B. Martin. October 1997. (Format: TXT=59551 bytes) (Status: INFORMATIONAL)
- 2228 FTP Security Extensions. M. Horowitz, S. Lunt. October 1997. (Format: TXT=58733 bytes) (Updates RFC0959) (Status: PROPOSED STANDARD)
- 2227 Simple Hit-Metering and Usage-Limiting for HTTP. J. Mogul, P. Leach. October 1997. (Format: TXT=85127 bytes) (Status: PROPOSED STANDARD)
- 2226 IP Broadcast over ATM Networks. T. Smith, G. Armitage. October 1997. (Format: TXT=30661 bytes) (Status: PROPOSED STANDARD)
- 2224 NFS URL Scheme. B. Callaghan. October 1997. (Format: TXT=22726 bytes) (Status: INFORMATIONAL)
- 2223 Instructions to RFC Authors. J. Postel, J. Reynolds. October 1997. (Format: TXT=37948 bytes) (Obsoletes RFC1543, RFC1111, RFC825) (Status: INFORMATIONAL)
- 2222 Simple Authentication and Security Layer (SASL). J. Myers. October 1997. (Format: TXT=35010 bytes) (Status: PROPOSED STANDARD)
-

- 2221 IMAP4 Login Referrals. M. Gahrns. October 1997. (Format: TXT=9251 bytes) (Status: PROPOSED STANDARD)
- 2220 The Application/MARC Content-type. R. Guenther. October 1997. (Format: TXT=7025 bytes) (Status: INFORMATIONAL)
- 2219 Use of DNS Aliases for Network Services. M. Hamilton, R. Wright. October 1997. (Format: TXT=17858 bytes) (Also BCP0017) (Status: BEST CURRENT PRACTICE)
- 2218 A Common Schema for the Internet White Pages Service. T. Genovese, B. Jennings. October 1997. (Format: TXT=16258 bytes) (Status: PROPOSED STANDARD)
- 2217 Telnet Com Port Control Option. G. Clark. October 1997. (Format: TXT=31664 bytes) (Status: EXPERIMENTAL)
- 2216 Network Element Service Specification Template. S. Shenker, J. Wroclawski. September 1997. (Format: TXT=53655 bytes) (Status: INFORMATIONAL)
- 2215 General Characterization Parameters for Integrated Service Network Elements. S. Shenker, J. Wroclawski. September 1997. (Format: TXT=39552 bytes) (Status: PROPOSED STANDARD)
- 2214 Integrated Services Management Information Base Guaranteed Service Extensions using SMIV2. F. Baker, J. Krawczyk, A. Sastry. September 1997. (Format: TXT=15971 bytes) (Status: PROPOSED STANDARD)
- 2213 Integrated Services Management Information Base using SMIV2. F. Baker, J. Krawczyk, A. Sastry. September 1997. (Format: TXT=36147 bytes) (Status: PROPOSED STANDARD)
- 2212 Specification of Guaranteed Quality of Service. S. Shenker, C. Partridge, R. Guerin. September 1997. (Format: TXT=52330 bytes) (Status: PROPOSED STANDARD)
- 2211 Specification of the Controlled-Load Network Element Service. J. Wroclawski. September 1997. (Format: TXT=46523 bytes) (Status: PROPOSED STANDARD)
- 2210 The Use of RSVP with IETF Integrated Services. J. Wroclawski. September 1997. (Format: TXT=77613 bytes) (Status: PROPOSED STANDARD)
- 2209 Resource ReSerVation Protocol (RSVP) -- Version 1 Message Processing Rules. R. Braden, L. Zhang. September 1997. (Format: TXT=51690 bytes) (Status: INFORMATIONAL)
- 2208 Resource ReSerVation Protocol (RSVP) -- Version 1 Applicability Statement Some Guidelines on Deployment. A. Mankin, Ed., F. Baker, B. Braden, S. Bradner, M. O'Dell, A. Romanow, A. Weinrib, L. Zhang. September 1997. (Format: TXT=14289 bytes) (Status: INFORMATIONAL)
- 2207 RSVP Extensions for IPSEC Data Flows. L. Berger, T. O'Malley. September 1997. (Format: TXT=30473 bytes) (Status: PROPOSED STANDARD)
-

- 2206 RSVP Management Information Base using SMIV2. F. Baker, J. Krawczyk, A. Sastry. September 1997. (Format: TXT=112937 bytes) (Status: PROPOSED STANDARD)
- 2205 Resource ReSerVation Protocol (RSVP) -- Version 1 Functional Specification. R. Braden, Ed., L. Zhang, S. Berson, S. Herzog, S. Jamin. September 1997. (Format: TXT=223974 bytes) (Status: PROPOSED STANDARD)
- 2204 ODETTE File Transfer Protocol. D. Nash. September 1997. (Format: TXT=151857 bytes) (Status: INFORMATIONAL)
- 2203 RPCSEC_GSS Protocol Specification. M. Eisler, A. Chiu, L. Ling. September 1997. (Format: TXT=50937 bytes) (Status: PROPOSED STANDARD)
- 2202 Test Cases for HMAC-MD5 and HMAC-SHA-1. Hash, Message, Authentications, Codes, message, digest, secure. (Format: TXT=11945 bytes) (Status: INFORMATIONAL)
- 2201 Core Based Trees (CBT) Multicast Routing Architecture. A. Ballardie. September 1997. (Format: TXT=38040 bytes) (Status: EXPERIMENTAL)
- 2200 INTERNET OFFICIAL PROTOCOL STANDARDS. J. Postel. June 1997. (Format: TXT=94506 bytes) (Obsoletes RFC2000, RFC1920, RFC1880, RFC1800, RFC1780, RFC1720, RFC1610, RFC1600, RFC1540, RFC1500, RFC1410, RFC1360, RFC1280, RFC1250, RFC1200, RFC1140, RFC1130, RFC1100, RFC1083) (Status: STANDARD)
- 2198 RTP Payload for Redundant Audio Data. C. Perkins, I. Kouvelas, O. Hodson, V. Hardman, M. Handley, J.C. Bolot, A. Vega-Garcia, S. Fosse-Parisis. September 1997. (Format: TXT=25166 bytes) (Status: PROPOSED STANDARD)
- 2197 SMTP Service Extension for Command Pipelining. N. Freed. September 1997. (Format: TXT=15003 bytes) (Obsoletes RFC1854) (Status: DRAFT STANDARD)
- 2196 Site Security Handbook. B. Fraser. September 1997. (Format: TXT=191772 bytes) (Obsoletes RFC1244) (Also FYI0008) (Status: INFORMATIONAL)
- 2195 IMAP/POP AUTHorize Extension for Simple Challenge/Response. J. Klensin, R. Catoe, P. Krumviede. September 1997. (Format: TXT=10468 bytes) (Obsoletes RFC2095)
- 2191 VENUS - Very Extensive Non-Unicast Service. G. Armitage. September 1997. (Format: TXT=31316 bytes)
- 2190 RTP Payload Format for H.263 Video Streams. C. Zhu. September 1997. (Format: TXT=26409 bytes)

1. Introduction

This Request for Comments (RFC) provides information about the preparation of RFCs, and certain policies relating to the publication of RFCs.

The RFC series of notes covers a broad range of interests. The core topics are the Internet and the TCP/IP protocol suite. However, any

Postel
1543

Instructions to RFC Authors

[Page 1] ? RFC
October 1993

topic related to computer communication may be acceptable at the discretion of the RFC Editor.

Memos proposed to be RFCs may be submitted by anyone. One large source of memos that become RFCs is the Internet Engineering Task

Force (IETF). The IETF working groups (WGs) evolve their working memos (known as Internet Drafts or I-Ds) until they feel they are ready for publication, then the memos are reviewed by the Internet Engineering Steering Group (IESG), and if approved sent by the IESG to the RFC Editor.

RFCs are distributed online by being stored as public access files, and a short message is sent to the distribution list indicating the availability of the memo.

The online files are copied by the interested people and printed or displayed at their site on their equipment. This means that the format of the online files must meet the constraints of a wide variety of printing and display equipment. (RFCs may also be returned via e-mail in response to an e-mail query, or RFCs may be found using information and database searching tools such as Gopher, Wais, WWW, or Mosaic.)

RFCs have been traditionally published and continue to be published in ASCII text.

While the primary RFCs is always an ASCII text file, secondary or alternative versions of RFC may be provided in PostScript. This decision is motivated by the desire to include diagrams, drawings, and such in RFCs. PostScript documents (on paper only, so far) are visually more appealing and have better readability.

PostScript was chosen for the fancy form of RFC publication over other possible systems (e.g., impress, interpress, oda) because of the perceived wide spread availability of PostScript capable printers.

However, many RFC users read the documents online and use various text oriented tools (e.g., emacs, grep) to search them. Often, brief excerpts from RFCs are included in e-mail. These practices are not yet practical with PostScript files.

PostScript producing systems are less standard than had been assumed and that several of the document production systems that claim to produce PostScript actually produce nonstandard results.

In the future, it may be necessary to identify a set of document production systems authorized for use in production of PostScript

RFCs, based on the reasonableness of the output files they generate.

2. Editorial Policy

Documents proposed to be RFCs are reviewed by the RFC Editor and possibly by other reviewers he selects.

The result of the review may be to suggest to the author some improvements to the document before publication.

Occasionally, it may become apparent that the topic of a proposed RFC is also the subject of an IETF Working Group, and that the author could coordinate with the working group to the advantage of both. The usual result of this is that a revised memo is produced as a working group Internet Draft and eventually emerges from the IETF process as a recommendation from the IESG to the RFC Editor.

In some cases it may be determined that the submitted document is not appropriate material to be published as an RFC.

In some cases it may be necessary to include in the document a statement based on the reviews about the ideas in the document. This may be done in the case that the document suggests relevant but inappropriate or unsafe ideas, and other situations.

The RFC Editor may make minor changes to the document, especially in the areas of style and format, but on some occasions also to the text. Sometimes the RFC Editor will undertake to make more significant changes, especially when the format rules (see below) are not followed. However, more often the memo will be returned to the author for the additional work.

Documents intended to become RFCs specifying standards track protocols must be approved by the IESG before being sent to the RFC Editor. The established procedure is that when the IESG completes work on a document that is to become a standards track RFC the communication will be from the Secretary of the IESG to the RFC Editor. Generally, the documents in question are Internet Drafts. The communication usually cites the exact Internet Draft in question (by file name). The RFC Editor must assume that only that file is to be processed to become the RFC. If the authors have small corrections to the text, they should be sent to the RFC Editor separately (or as a "diff"), do not send a new version of the document.

In some cases, authors prepare alternate secondary versions of RFCs in fancy format using PostScript. Since the ASCII text version of the RFC is the primary version, the PostScript version must match the

text version. The RFC Editor must decide if the PostScript version is "the same as" the ASCII version before the PostScript version can be published.

The effect of this is that the RFC Editor first processes the ASCII version of the memo through to publication as an RFC. If the author wishes to submit a PostScript version at that point that matches the ASCII version (and the RFC Editor agrees that it does), then the PostScript version will be installed in the RFC repositories and

announced to the community.

Due to various time pressures on the RFC Editorial staff the time elapsed between submission and publication can vary greatly. It is always acceptable to query (ping) the RFC Editor about the status of an RFC during this time (but not more than once a week). The two weeks preceding an IETF meeting are generally very busy, so RFCs submitted shortly before an IETF meeting are most likely to be published after the meeting.

3. Format Rules

To meet the distribution constraints, the following rules are established for the two allowed formats for RFCs: ASCII and PostScript.

The RFC Editor attempts to ensure a consistent RFC style. To do this the RFC Editor may choose to reformat the RFC submitted. It is much easier to do this if the submission matches the style of the most recent RFCs. Please do look at some recent RFCs and prepare yours in the same style.

You must submit an editable online document to the RFC Editor. The RFC Editor may require minor changes in format or style and will insert the actual RFC number.

Most of the RFCs are processed by the RFC Editor with the unix "nroff" program using a very simple set of the formatting commands (or "requests") from the "ms" macro package (see the appendix). If a memo submitted to be an RFC has been prepared by the author using nroff, it is very helpful to let the RFC Editor know that when it is submitted.

3a. ASCII Format Rules

The character codes are ASCII.

Each page must be limited to 58 lines followed by a form feed on a line by itself.

Postel
1543

Instructions to RFC Authors

[Page 4] ? RFC
October 1993

Each line must be limited to 72 characters followed by carriage return and line feed.

No overstriking (or underlining) is allowed.

These "height" and "width" constraints include any headers, footers, page numbers, or left side indenting.

Do not fill the text with extra spaces to provide a straight right margin.

Do not do hyphenation of words at the right margin.

Do not use footnotes. If such notes are necessary, put them at the end of a section, or at the end of the document.

Use single spaced text within a paragraph, and one blank line between paragraphs.

Note that the number of pages in a document and the page numbers on which various sections fall will likely change with reformatting. Thus cross references in the text by section number usually are easier to keep consistent than cross references by page number.

RFCs in ASCII Format may be submitted to the RFC Editor in e-mail messages (or as online files) in either the finished publication format or in NROFF. If you plan to submit a document in NROFF please consult the RFC Editor first.

3b. PostScript Format Rules

Standard page size is 8 1/2 by 11 inches.

Margin of 1 inch on all sides (top, bottom, left, and right).

Main text should have a point size of no less than 10 points with a line spacing of 12 points.

Footnotes and graph notations no smaller than 8 points with a line spacing of 9.6 points.

Three fonts are acceptable: Helvetica, Times Roman, and Courier. Plus their bold-face and italic versions. These are the three standard fonts on most PostScript printers.

Prepare diagrams and images based on lowest common denominator PostScript. Consider common PostScript printer functionality and

Postel
1543

Instructions to RFC Authors

[Page 5] ? RFC
October 1993

memory requirements.

The following PostScript commands should not be used:
initgraphics, erasepage, cypage, grestoreall, initmatrix,
initclip, banddevice, framedevice, nulldevice and renderbands.

Note that the number of pages in a document and the page numbers on which various sections fall will likely differ in the ASCII and the PostScript versions. Thus cross references in the text by section number usually are easier to keep consistent than cross references by page number.

These PostScript rules are likely to changed and expanded as

experience is gained.

RFCs in PostScript Format may be submitted to the RFC Editor in e-mail messages (or as online files). If you plan to submit a document in PostScript please consult the RFC Editor first.

Note that since the ASCII text version of the RFC is the primary version, the PostScript version must match the text version. The RFC Editor must decide if the PostScript version is "the same as" the ASCII version before the PostScript version can be published.

4. Headers and Footers

There is the first page heading, the running headers, and the running footers.

4a. First Page

Please see the front page of this memo for an example of the front page heading. On the first page there is no running header. The top of the first page has the following items:

Network Working Group

The traditional heading for the group that founded the RFC series. This appears on the first line on the left hand side of the heading.

Request for Comments: nnnn

Identifies this as a request for comments and specifies the number. Indicated on the second line on the left side. The actual number is filled in at the last moment before publication by the RFC Editor.

Postel
1543

Instructions to RFC Authors

[Page 6] ? RFC
October 1993

Author

The author's name (first initial and last name only) indicated on the first line on the right side of the heading.

Organization

The author's organization, indicated on the second line on the right side.

Date

This is the Month and Year of the RFC Publication. Indicated on the third line on the right side.

Updates or Obsoletes

If this RFC Updates or Obsoletes another RFC, this is indicated as third line on the left side of the heading.

Category

The category of this RFC, one of: Standards Track, Informational, or Experimental. This is indicated on the third (if there is no Updates or Obsoletes indication) or fourth line of the left side.

Title

The title appears, centered, below the rest of the heading.

If there are multiple authors and if the multiple authors are from multiple organizations the right side heading may have additional lines to accommodate them and to associate the authors with the organizations properly.

4b. Running Headers

The running header in one line (on page 2 and all subsequent pages) has the RFC number on the left (RFC NNNN), the (possibly a shortened form) title centered, and the date (Month Year) on the right.

4c. Running Footers

The running footer in one line (on all pages) has the author's last name on the left and the page number on the right ([Page N]).

Postel
1543

Instructions to RFC Authors

[Page 7] ? RFC
October 1993

5. Status Section

Each RFC must include on its first page the "Status of this Memo" section which contains a paragraph describing the type of the RFC.

The content of this section will be one of the three following statements.

Standards Track

"This document specifies an Internet standards track protocol for the Internet community, and requests discussion and suggestions for improvements. Please refer to the current edition of the "Internet Official Protocol Standards" (STD 1) for the standardization state and status of this protocol. Distribution of this memo is unlimited."

Experimental

"This memo defines an Experimental Protocol for the Internet community. This memo does not specify an Internet standard of any kind. Discussion and suggestions for improvement are requested. Distribution of this memo is unlimited."

Informational

"This memo provides information for the Internet community. This memo does not specify an Internet standard of any kind. Distribution of this memo is unlimited."

6. Introduction Section

Each RFC should have an Introduction section that (among other things) explains the motivation for the RFC and (if appropriate) describes the applicability of the protocol described.

Some example paragraphs are:

Protocol

This protocol is intended to provide the bla-bla service, and be used between clients and servers on host computers. Typically the clients are on workstation hosts and the servers on mainframe hosts.

or

Postel
1543

Instructions to RFC Authors

[Page 8] ? RFC
October 1993

This protocol is intended to provide the bla-bla service, and be used between special purpose units such as terminal servers or routers and a monitoring host.

Discussion

The purpose of this RFC is to focus discussion on particular problems in the Internet and possible methods of solution. No proposed solutions in this document are intended as standards for the Internet. Rather, it is hoped that a general consensus will emerge as to the appropriate solution to such problems, leading eventually to the adoption of standards.

Interest

This RFC is being distributed to members of the Internet community in order to solicit their reactions to the proposals contained in it. While the issues discussed may

not be directly relevant to the research problems of the Internet, they may be interesting to a number of researchers and implementers.

Status Report

In response to the need for maintenance of current information about the status and progress of various projects in the Internet community, this RFC is issued for the benefit of community members. The information contained in this document is accurate as of the date of publication, but is subject to change. Subsequent RFCs will reflect such changes.

These paragraphs need not be followed word for word, but the general intent of the RFC must be made clear.

7. References Section

Nearly all RFCs contain citations to other documents, and these are listed in a References section near the end of the RFC. There are many styles for references, and the RFCs have one of their own. Please follow the reference style used in recent RFCs. See the reference section of this RFC for an example. Please note that for protocols that have been assigned STD numbers, the STD number must be included in the reference.

Postel
1543

Instructions to RFC Authors

[Page 9] ? RFC
October 1993

8. Security Considerations Section

All RFCs must contain a section near the end of the document that discusses the security considerations of the protocol or procedures that are the main topic of the RFC.

9. Author's Address Section

Each RFC must have at the very end a section giving the author's address, including the name and postal address, the telephone number, (optional: a FAX number) and the Internet e-mail address.

10. Relation to other RFCs

Sometimes an RFC adds information on a topic discussed in a previous RFC or completely replaces an earlier RFC. There are two terms used for these cases respectively, UPDATES and OBSOLETEs. A document that obsoletes an earlier document can stand on its own. A document that merely updates an earlier document cannot stand on its own; it is something that must be added to or inserted into the previously existing document, and has limited usefulness independently. The

terms SUPERSEDES and REPLACES are no longer used.

UPDATES

To be used as a reference from a new item that cannot be used alone (i.e., one that supplements a previous document), to refer to the previous document. The newer publication is a part that will supplement or be added on to the existing document; e.g., an addendum, or separate, extra information that is to be added to the original document.

OBSOLETEES

To be used to refer to an earlier document that is replaced by this document. This document contains either revised information, or else all of the same information plus some new information, however extensive or brief that new information is; i.e., this document can be used alone, without reference to the older document.

For example:

On the Assigned Numbers RFCs the term OBSOLETEES should be used since the new document actually incorporate new information (however brief) into the text of existing information and is more up-to-date than the older document, and hence, replaces it and makes it OBSOLETE.

Postel
1543

Instructions to RFC Authors

[Page 10] ? RFC
October 1993

In lists of RFCs or the RFC-Index (but not on the RFCs themselves) the following may be used with early documents to point to later documents.

OBSOLETEED-BY

To be used to refer to the newer document(s) that replaces the older document.

UPDATED-BY

To be used to refer to the newer section(s) which are to be added to the existing, still used, document.

11. Protocol Standards Process

See the current "Internet Official Protocol Standards" (STD 1) memo for the definitive statement on protocol standards and their publication [1].

The established procedure is that when the IESG completes work on a document that is to become a standards track RFC the communication will be from the Secretary of the IESG to the RFC Editor. Generally,

the documents in question are Internet Drafts. The communication usually cites the exact Internet Draft (by file name) in question. The RFC Editor must assume that only that file is to be processed to become the RFC. If the authors have small corrections to the text, they should be sent to the RFC Editor separately (or as a "diff"), do not send a new version of the document.

12. Contact

To contact the RFC Editor send an email message to

"RFC-Editor@ISI.EDU".

13. Distribution Lists

The RFC announcements are distributed via two mailing lists: the "IETF-Announce" list, and the "RFC-DIST" list. You don't want to be on both lists.

To join (or quit) the IETF-Announce list send a message to IETF-Request@cnri.reston.va.us.

To join (or quit) the RFC-DIST list send a message to RFC-Request@NIC.DDN.MIL.

Postel

1543

Instructions to RFC Authors

[Page 11] ? RFC

October 1993

14. RFC Index

Several organizations maintain RFC Index files, generally using the file name "rfc-index.txt". The contents of such a file copied from one site may not be identical to that copied from another site.

15. Security Considerations

This RFC raises no security issues (however, see Section 6).

18. Appendix - RFC "nroff macros"

Generally, we use the very simplest nroff features. We use the "ms" macros. So, "nroff -ms input-file > output-file". However, we could not get nroff to do the right thing about putting a form feed after the last visible line on a page and no extra line feeds before the first visible line of the next page. We want:

```
last visible line on page i
^L
first visible line on page i+1
```

So, we invented some hacks to fix this including a "sed" script called "fix.sh" and a "c" program we called "pg" (pg is called from fix). So the command to process the file becomes:

```
nroff -ms input-file | fix.sh > output-file
```

Now as to the nroff features we actually use, I'll append a sample memo, prepared in RFC style.

The sed script fix.sh is:

```
sed -e 's/FORMFEED\[Page/          \[Page/' $* | pg -n5
```

The pg program is:

~~~Beginning of pg program~~~

```

/* $Header$
 *
 * Remove N lines following any line that contains a form feed (^L).
 * (Why can't this be done with awk or sed?)
 *
 * OPTION:
 *     -n#      Number of lines to delete following each ^L (0 default).
 * $Log$
 */ #include <stdio.h> #define FORM_FEED      '\f' #define OPTION "n:N:" /*
for getopt() */

```

```
extern char *optarg; extern int optind;
```

```
main(argc, argv) int      argc; char      *argv[];
```

```

.ce A Standard for the Transmission of IP Datagrams on Avian Carriers

.ti 0 Status of this Memo

.fi .in 3 This memo describes an experimental method for the encapsulation of IP datagrams in avian carriers. This specification is primarily useful in Metropolitan Area Networks. This is an experimental, not recommended standard. Distribution of this memo is unlimited.

.ti 0 Overview and Rational

Avian carriers can provide high delay, low throughput, and low altitude service. The connection topology is limited to a single point-to-point path for each carrier, used with standard carriers, but many carriers can be used without significant interference with each other, outside of early spring. This is because of the 3D ether space available to the carriers, in contrast to the 1D ether used by IEEE802.3. The carriers have an intrinsic collision avoidance system, which increases availability. Unlike some network technologies, such as packet radio, communication is not limited to line-of-sight distance. Connection oriented service is available in some cities, usually based upon a central hub topology.

Postel [Page 15] ? RFC  
 1543 Instructions to RFC Authors October 1993

.ti 0 Frame Format

The IP datagram is printed, on a small scroll of paper, in hexadecimal, with each octet separated by whitestuff and blackstuff. The scroll of paper is

wrapped around one leg of the avian carrier. A band of duct tape is used to secure the datagram's edges. The bandwidth is limited to the leg length. The MTU is variable, and paradoxically, generally increases with increased carrier age. A typical MTU is 256 milligrams. Some datagram padding may be needed.

Upon receipt, the duct tape is removed and the paper copy of the datagram is optically scanned into a electronically transmittable form.

.ti 0 Discussion

Multiple types of service can be provided with a prioritized pecking order. An additional property is built-in worm detection and eradication. Because IP only guarantees best effort delivery, loss of a carrier can be tolerated. With time, the carriers are self-regenerating. While broadcasting is not specified, storms can cause data loss. There is persistent delivery retry, until the carrier drops. Audit trails are automatically generated, and can often be found on logs and cable trays.

.ti 0 Security Considerations

.in 3 Security is not generally a problem in normal operation, but special measures must be taken (such as data encryption) when avian carriers are used in a tactical environment.

## 1.4 Retrieval

Where and how to get new RFCs

=====

RFCs may be obtained via EMAIL or FTP from many RFC Repositories. The Primary Repositories will have the RFC available when it is first announced, as will many Secondary Repositories. Some Secondary Repositories may take a few days to make available the most recent RFCs.

Primary Repositories:

RFCs can be obtained via FTP from DS.INTERNIC.NET, NIS.NSF.NET, NISC.JVNC.NET, FTP.ISI.EDU, WUARCHIVE.WUSTL.EDU, SRC.DOC.IC.AC.UK, FTP.NCREN.NET, FTP.SESQUI.NET, or NIS.GARR.IT.

### 1. DS.INTERNIC.NET - InterNIC Directory and Database Services

RFC's may be obtained from DS.INTERNIC.NET via FTP, WAIS, and electronic mail. Through FTP, RFC's are stored as rfc/rfcnnnn.txt or rfc/rfcnnnn.ps where 'nnnn' is the RFC number. Login as "anonymous" and provide your e-mail address as the password. Through WAIS, you may use either your local WAIS client or telnet to DS.INTERNIC.NET and login as "wais" (no password required) to access a WAIS client. Help information and a tutorial for using WAIS are available online. The WAIS database to search is "rfcs".

Directory and Database Services also provides a mail server interface. Send a mail message to mailserv@ds.internic.net and include any of the following commands in the message body:

|                           |                                                                |
|---------------------------|----------------------------------------------------------------|
| document-by-name rfcnnnn  | where 'nnnn' is the RFC number<br>The text version is sent.    |
| file /ftp/rfc/rfcnnnn.yyy | where 'nnnn' is the RFC number.<br>and 'yyy' is 'txt' or 'ps'. |
| help                      | to get information on how to use<br>the mailserver.            |

The InterNIC Directory and Database Services Collection of Resource Listings, Internet Documents such as RFCs, FYIs, STDs, and Internet Drafts, and Publically Accessible Databases are also now available via Gopher. All our collections are waisindexed and can be searched from the Gopher menu.

To access the InterNIC Gopher Servers, please connect to "internic.net" port 70.

contact: admin@ds.internic.net

### 2. NIS.NSF.NET

To obtain RFCs from NIS.NSF.NET via FTP, login with username "anonymous" and password "guest"; then connect to the directory of RFCs with cd /internet/documents/rfc. The file name is of the form rfcnnnn.txt (where "nnnn" refers to the RFC number).

For sites without FTP capability, electronic mail query is available from NIS.NSF.NET. Address the request to NIS-INFO@NIS.NSF.NET and leave the subject field of the message blank. The first text line of the message must be "send rfcnnnn.txt" with nnnn the RFC number.

contact: rfc-mgr@merit.edu

### 3. NISC.JVNC.NET

RFCs can also be obtained via FTP from NISC.JVNC.NET, with the pathname rfc/rfcNNNN.txt (where "NNNN" refers to the number of the RFC). An index can be obtained with the pathname rfc/rfc-index.txt

JvNCnet also provides a mail service for those sites which cannot use FTP. Address the request to "SENDRFC@NISC.JVNC.NET" and in the "Subject:" field of the message indicate the RFC number, as in "Subject: rfcNNNN" (where NNNN is

the RFC number). Please note that RFCs whose numbers are less than 1000 need not place a leading "0". (For example, RFC932 is fine.) For a complete index to the RFC library, enter "rfc-index" in the "Subject:" field, as in "Subject: rfc-index". No text in the body of the message is needed.

contact: rfc-admin@nisc.jvnc.net

#### 4. FTP.ISI.EDU

RFCs can be obtained via FTP from FTP.ISI.EDU, with the pathname in-notes/rfcnnnn.txt (where "nnnn" refers to the number of the RFC). Login with FTP username "anonymous" and password "guest".

RFCs can also be obtained via electronic mail from ISI.EDU by using the RFC-INFO service. Address the request to "rfc-info@isi.edu" with a message body of:

Retrieve: RFC            Doc-ID: RFCnnnn

(Where "nnnn" refers to the number of the RFC (always use 4 digits - the DOC-ID of RFC 822 is "RFC0822")). The RFC-INFO@ISI.EDU server provides other ways of selecting RFCs based on keywords and such; for more information send a message to "rfc-info@isi.edu" with the message body "help: help".

contact: RFC-Manager@ISI.EDU

#### 5. WUARCHIVE.WUSTL.EDU

RFCs can also be obtained via FTP from WUARCHIVE.WUSTL.EDU, with the pathname info/rfc/rfcnnnn.txt.Z (where "nnnn" refers to the number of the RFC and "Z" indicates that the document is in compressed form).

At WUARCHIVE.WUSTL.EDU the RFCs are in an "archive" file system and various archives can be mounted as part of an NFS file system. Please contact Chris Myers (chris@wugate.wustl.edu) if you want to mount this file system in your NFS.

contact: chris@wugate.wustl.edu

#### 6. SRC.DOC.IC.AC.UK

RFCs can be obtained via FTP from SRC.DOC.IC.AC.UK with the pathname rfc/rfcnnnn.txt.Z or rfc/rfcnnnn.ps.Z (where "nnnn" refers to the number of the RFC). Login with FTP username "anonymous" and password "your-email-address". To obtain the RFC Index, use the pathname rfc/rfc-index.txt.Z. (The trailing .Z indicates that the document is in compressed form.)

SRC.DOC.IC.AC.UK also provides an automatic mail service for those sites in the UK which cannot use FTP. Address the request to info-server@doc.ic.ac.uk with a Subject: line of "wanted" and a message body of:

request sources  
topic path rfc/rfcnnnn.txt.Z  
request end

---

(Where "nnnn" refers to the number of the RFC.) Multiple requests may be included in the same message by giving multiple "topic path" commands on separate lines. To request the RFC Index, the command should read: topic path rfc/rfc-index.txt.Z

The archive is also available using NIFTP and the ISO FTAM system.

contact: ukuug-soft@doc.ic.ac.uk

## 7. FTP.NCREN.NET

To obtain RFCs from FTP.NCREN.NET via FTP, login with username "anonymous" and your internet e-mail address as password. The RFCs can be found in the directory /rfc, with file names of the form: rfcNNNN.txt or rfcNNNN.ps where NNNN refers to the RFC number.

This repository is also accessible via WAIS and the Internet Gopher.

contact: rfc-mgr@ncren.net

## 8. FTP.SESQUI.NET

RFCs can be obtained via FTP from FTP.SESQUI.NET, with the pathname pub/rfc/rfcnnnn.xxx (where "nnnn" refers to the number of the RFC and xxx indicates the document form, txt for ASCII and ps for Postscript).

At FTP.SESQUI.NET the RFCs are in an "archive" file system and various archives can be mounted as part of an NFS file system. Please contact RFC-maintainer (rfc-maint@sesqui.net) if you want to mount this file system in your NFS.

contact: rfc-maint@sesqui.net

## 9. NIS.GARR.IT

RFCs can be obtained from NIS.GARR.IT FTP archive with the pathname mirrors/RFC/rfcnnnn.txt (where "nnnn" refers to the number of the RFC). Login with FTP, username "anonymous" and password "guest".

Summary of ways to get RFC from GARR-NIS ftp archive:

|                   |                                                                                               |                      |
|-------------------|-----------------------------------------------------------------------------------------------|----------------------|
| Via ftp:          | ftp.nis.garr.it directory mirrors/RFC                                                         |                      |
| Via gopher:       | gopher.nis.garr.it folders                                                                    | GARR-NIS anonymous ↔ |
|                   | FTP                                                                                           |                      |
| "ftp.nis.garr.it" | mirrors                                                                                       | RFC                  |
| Via WWW:          | ftp://ftp.nis.garr.it/mirrors/RFC                                                             |                      |
| Via e-mail:       | send a mail to dbserv@nis.garr.it whose body contains "get mirrors/RFC/rfc<number>.[txt,ps]". |                      |

To get via electronic mail a file in the ftp archive, put the get <fullpathname> command either in the subject or as a mail body line of a mail

message sent to dbserve@nis.garr.it. <fullpathname> must be the concatenation of two strings, the directory path and the filename. Remember: use uppercase and lowercase exactly! The directory path is listed at the beginning of each block of files.

Example: to get RFC1004...the command should be: get mirrors/RFC/rfc1004.txt.

UUNET Archive -----

UUNET archive, which includes the RFC's, various IETF documents,  
 and other information regarding the internet, is available to the  
 public via anonymous ftp (to ftp.uu.net) and anonymous uucp, and  
 will be available via an anonymous kermit server soon. Get the  
 file /archive/inet/ls-lR.Z for a listing of these documents.

Any site in the US running UUCP may call +1 900 GOT SRCS and use  
 the login "uucp". There is no password. The phone company will  
 bill you at \$0.50 per minute for the call. The 900 number only  
 works from within the US.

~~~~~

---

Requests for special distribution of RFCs should be addressed to either the author of the RFC in question, to NIC@INTERNIC.NET.

Submissions for Requests for Comments should be sent to RFC-EDITOR@ISI.EDU. Please consult "Instructions to RFC Authors", RFC 1543, for further information.

Requests to be added to or deleted from the RFC distribution list should be sent to RFC-REQUEST@NIC.DDN.MIL.

Changes to this file "rfc-retrieval.txt" should be sent to RFC-MANAGER@ISI.EDU.
