## Chapter 1

# ObjectFile

### 1.1 Object: ObjectFile

OBJECT DOCUMENTATION  
Name: OBJECTFILE  
Version: 0.9 Beta.  
Date: December 1997  
Author: Paul Manias  
Copyright: DreamWorld Productions, 1996-1997. All rights reserved.

CHANGES VERSION 0.9B  
Renamed: ObjectBase now called ObjectFile.

### 1.2 Object: ObjectFile

OBJECT  
Name: ObjectFile  
Module: Master  
Version: 1  
Type: Complex

DESCRIPTION  
Not yet documented.

### 1.3 ObjectFile: Load()

ACTION  
Name: Load()  
Object: ObjectFile  
Short: Load an external object file.

DESCRIPTION  
Loads in a standard ObjectFile, checks it for validity and returns the resulting ObjectFile back to you.

Once you have called this action you can use the object processing

---

functions such as `GetFileObject()` to obtain your data. See the information on Objects for further understanding of these files.

You will need to free the ObjectFile after you have finished using it.

SEE ALSO

Kernel: `Load()`
