

Why Convert FONT exists

126476_PixelRule.tiff ↵

I have a variety of specialized bitmap fonts that I've created over the years on my Mac. Because there is no (inexpensive) font maker for the NeXT yet, and because I wanted to preserve the original bitmap look, I also wanted to have bitmapped representations, and not outlines, created on the NeXT side. Obviously, then, I wrote this application for my own needs, and can make no promises that it will satisfy yours (but hope it will).

This utility is distributed under the terms of the GNU GPL. See the 'copying' topic for more information.
