Pointers to Help You Out

257522_PixelRule.tiff ¬

· You can call the routines to link converter maually. This is useful when needing to bi-pass the open and save panels or working at the UNIX shell level.
· Most converters should work without the WindowServer active. Examples of ones that might not is one that reads EPS files.
· File extensions are *very* important. This is how the object can tell what kind of converter is being used. Make sure, when passing names, that the filename always has a valid extension, otherwise thing won't work nicely for the user.
· When running a save panel, the linked converter's specializeation parameters only last as long as the next save panel.
· If you'd like to open multiple images in a file, you'll have to link converters yourself and message them via the openMulitple and saveMultiple calls.
