

Printing

This brings up the standard NeXT Print panel, with two additional buttons. The left button allows you to print in black and white even if you are viewing the curves in color. The right button toggles between "Line Styles as Shown" and "Cycle Line Styles"; the latter option causes the curves to be printed with line styles that cycle through the various possibilities. Again, this may be useful if you are viewing the curves in different colors but are printing in black and white. These buttons are initialized based on your settings in the ;Preferences.rtf;Preferences.Print;¬Preferences panel.
