

# HOW TO USE NeXT MAIL WITH MODEM

Prepared for (NS)<sup>2</sup> (Nova Scotia NeXT Society) by Marek Roland-Mieszkowski  
Digital Recordings, Halifax, Nova Scotia, Canada, August 07, 1992

## VAX --> NeXT TRANSFER :

, Use Terminal application on NeXT. Type following things:

```
localhost> kermi {Ret}  
C-Kermi> set line /dev/cua {Ret}  
C-Kermi> set speed 1200 {Ret} (for 1200 bps modem)  
C-Kermi> c {Ret}  
now enter your modem specific commands to connect to VAX  
(in my case AT D4942500 {Ret})
```

, Let's say that you are already in VAX and you are reading your mail:

```
MAIL> read 534 {Ret}  
mail would be read to your screen  
MAIL> extract m.534 {Ret} (extracts your mail to file m.534)  
MAIL> quit {Ret}  
$ setup kermi {Ret} (will start Kermit on VAX)  
$ kermi {Ret}  
Kermi-32> server {Ret}  
some text will appear on the screen  
Press simultaneously "Control" and "}" keys and then "c" key.  
C-Kermi> get m.534 {Ret}  
After transfer is finished type:  
C-Kermi> finish {Ret}  
C-kermi> c {Ret}  
      {Ret}  
      ....  
Kermi-32> quit {Ret}  
Now you can delete file on VAX:  
$ del m.534;1 {Ret}  
$ logout {Ret} (if you want to logout at this moment)
```

, Let's say that you are working on NeXT under username marek01 (do not use ROOT, unless you would like to have problems- use low priority user to do your everyday work)

Then open up your Terminal program and at the prompt issue the following shell command:

```
localhost> mail -s "Any Title" username < filename
```

for example:

```
localhost> mail -s "News from NeXT" marek01 < m.534
```

This mails the file m.534 to the user "marek01" Note that "username" should be "me" or "marek01" or whatever your username is on the NeXT and filename is whatever you have named this file.

, Now launch the NeXT Mail utility by clicking on Mail.app in your work directory and, voila, the Mail message will appear in your box! If you selected "Manual" in your Mail Preferences, then press button "New Mail" to get mail loaded into your mailbox.
