

Appendix C

TeX Equivalents

In order to streamline equation entry, we have provided keyword equivalents for most of the palette items available in EquationBuilder. For the convenience of those accustomed to using the TeX typesetting language to prepare manuscripts, we have used TeX keywords whenever possible.

In order to use these equivalents, press either the Esc key or $\text{\^{\@}}\text{\^{\@}}$ to activate the keyword equivalents text field in the lower right-hand corner of the equation window (see Appendix A). From there, just enter the keyword equivalent, and press return.
