Description:

Introducing Pixel Magician, the universal picture file viewer and translator for NeXT computers. Pixel Magician gives your NeXT free reign in the world of computer graphics because it converts to and from all the popular file formats.

Pixel Magician lets you view graphic files in other formats, import them and treat them as if they were created on your NeXT. Or export pictures created on NeXT to other platforms in the appropriate file format, color map and bit depth.

Use the convert window to quickly browse or preview any picture. Convert entire directories by simply dragging and dropping. The Image Inspector allows you to control the color-space, palette selections, bit depth and dithering method for any image. With the Scaling Inspector you can precisely control the dimensions of each image.
