

# *Set X and Y Equations:*

paste\_16.tiff ↪

After selecting either of the Select Equations menu items, an appropriate panel will appear. This panel provides two different ways of defining the function. You must select one of the twelve common families of functions.

## Instructions for using the twelve families:

After choosing one of the twelve families (by clicking the appropriate button), you must enter values for A, B, C, and D.

## Returning to the Control Panel:

In any case, your function will appear (with the correct value for the letters) in the

Control Panel after you press "Set". Note that you may only define one function at a time while in either "Select" function panel.
